Yükseköğretim Kurulu (YÖK), (2025). https://yokatlas.yok.gov.tr/lisans-bolum.php?b=13961, (E. T.: 01.02.2026).

ihtiyacını, nitelikli üretimi destekleyen stratejik bir zemin olarak görmeleri ve bu alanı gözetmeleri faydalı olacaktır. Liderlik vizyonu, çalışanların kendi içsel nizamlarını kurmaları için gereksinim duydukları o 'yekpare anları' (Tanpınarvari) teşvik eden, otonomi temelli bir güven kültürünün inşasına odaklanabilir.

4) **Bireysel Dönüşüm ve Bilişsel Esneklik Eğitimleri:** Çalışanların, kontrol dışı gelişen izolasyon süreçlerini bilinçli tek başınalık pratiklerine dönüştürebilmeleri amacıyla; bilişsel esneklik temelli kurumsal destek mekanizmalarının devreye alınması faydalı olabilir. Bu süreçte tek başınalık hali, bir 'eksiklik' yerine 'yüksek odaklanma potansiyeline sahip bir zaman dilimi' olarak yeniden çerçevelenebilir (bilişsel yeniden düzenleme).
5) **Nöro-Çeşitlilik ve Bireysel Farklılıkların Gözetilmesi:** Örgütsel verimlilik arayışında 'tek tip çalışan' varsayımından uzaklaşılması; bireysel farklılıkların birer potansiyel olarak değerlendirilmesine olanak tanıyabilir. Özellikle bilişsel açıdan farklı hassasiyetlere sahip bireylerin (nöroçeşitlilik) müstakil çalışma alanlarına duyabileceği gereksinimlerin gözetilmesi, bu hassasiyetlere uygun kişiselleştirilmiş çözümler sunulması yoluyla kurumsal performansın desteklenmesi mümkün görünmektedir.

Sonuç olarak, iş yerinde sürdürülebilir bir performans; sadece fiziksel sınırların kaldırılmasıyla değil, bireyin kendi 'zihinsel nizamını' kurabileceği sessiz alanların sisteme entegre edilmesiyle daha olası görünmektedir. Bu çalışma, tek başınalığın kurumsal sosyal ağın bir alternatifi olmadığını, aksine bilişsel restorasyon yoluyla bu ağı besleyen stratejik bir sığınak işlevi gördüğünü ileri sürmektedir. Geleceğin organizasyonları, çalışanlarını sadece sosyal birimler olarak değil, derin düşünme kapasitesine sahip 'zihinsel simyacılar' olarak konumlandırmanın verimlilik çıktılarını olumlu etkileyebileceğini göz önünde bulundurmalıdır

EĞİTİM YAYINEVİ GRUBU

bağlara ilişkin veriler, medreselerin aynı zamanda barınma, istihdam, sosyal kabul ve statü üretim mekânları olduğunu göstermektedir. Özellikle engellilik kayıtlarının dışlayıcı bir dille değil, olağan tanımlayıcı unsurlar arasında yer alması, Osmanlı taşra toplumunda medrese çevresinin kapsayıcı karakterine işaret etmektedir.

Sonuç olarak bu çalışma, Aydın Güzelhisarı örneği üzerinden Osmanlı taşra medreselerini, merkeziyetçi ve tek boyutlu yaklaşımların ötesinde; dinamik, çok işlevli ve toplumsal dokuyla derinlemesine bütünleşmiş kurumlar olarak yeniden tanımlamaktadır. Bu yönüyle çalışma, yalnızca Aydın Güzelhisarı medreselerinin tarihine değil; Osmanlı taşra eğitim sisteminin genel karakterinin yeniden değerlendirilmesine imkân tanıyan güçlü bir örnek olay incelemesi niteliği taşımaktadır.

tedbirler almak zorunda kalmıştır. Kahve getiren gemilerin uğradığı İzmir, Kuşadası, Çeşme ve Sakız gibi yerlerin mütesellim, muhafız, voyvoda, gümrükçü, kadı ve naip gibi yetkililerine fermanlar göndermiş ve gelen kahvenin İstanbul'a gönderilmesini emretmiştir. Fermanlar gereği İzmir ve diğer yerlerde mahzenlerde kahve aranmış ve ele geçirilen ürünler İstanbul'a gönderilmiştir.

İzmir ve çevresindeki gümrüklerde kahvenin vergilendirilmesi konusu ihtilaflara neden olmuştur. Vergi ödemek istemeyen yabancı tüccarlar ve Osmanlı gümrük memurları arasındaki ihtilaflara ilgili devletlerin diplomatları da karışmıştır. Yabancı tüccarlar ve tabi oldukların devletlerin diplomatik temsilcileri ahitnamelere dayanarak kahve vergisinden kaçınmak istemiştir. Diğer taraftan vergi kaçırma peşinde olan Osmanlı tebaası Rum ve Ermeni tacirler Rusya ve İngiltere gibi devletlerin bayrakları altında ticaret yaptıklarını iddia ederek İzmir gümrüğünde vermeleri gereken kahve vergisini ödemek istememiştir. Yine bazı Müslüman tüccarlar Mısır'dan aldıkları kahveyi yabancı ortakları adına kaydettirmekte, İzmir ve çevresine getirerek vergi vermeden fahiş fiyatlarla piyasaya sürmekteydi.

Bütün kaçakçılık ve yolsuzluk yöntemlerinin önüne geçerek kahve ticaretini kontrol altında tutmak isteyen Babıali, konuyla ilgili olarak İzmir ve çevresine çok sayıda emir göndermiştir. Fermanlar gereği İzmir'de depo ve mahzenlerde arama yapılmış, bulunan kahve el konularak İstanbul'a gönderilmiştir. Vergi uygulamalarında ahitname, ferman ve kurallara uyma konusunda İzmir ve çevrenindeki gümrüklerde bulunan Osmanlı memurları uyarılmıştır.

Aşiret Faktörü: Konar-göçer Türkmen aşiretleri (Yörükler), sistemin en kırılgan halkasını oluşturmuştur. Vergi kaynağı olarak görülen bu gruplar, mültezim baskısı ve idari boşluklar nedeniyle sisteme entegre edilememiş; aksine birer asayiş sorununa dönüşerek maliyenin istikrarını bozmuştur.

Tasfiyenin Dinamiği: Malikâne sisteminin kaldırılması, İstanbul'dan gelen soyut bir reform değil; Ahmet Bey'in ölümüyle doğan otorite boşluğunun, Mısır işgali tehdidinin ve halkın şikâyetlerinin zorunlu kıldığı bir "kriz yönetimi" hamlesidir. "Yed-i Vâhid" sistemine geçiş, devletin bölgedeki mali egemenliğini yeniden tesis etme girişimidir.

Nihayetinde Adana örneği; Osmanlı taşra idaresinin, katı kurallar manzumesi değil; yerel güçler, coğrafi şartlar ve ekonomik krizler karşısında sürekli şekil değiştiren, esnek ve pragmatik bir "pazarlık rejimi" olduğunu ortaya koymaktadır.

Sonuç olarak II. Beyazıt Camii ve Külliyesi örneği, onarım ve bakım faaliyetlerinin yalnızca mimari sürekliliği sağlamakla sınırlı olmadığını; aynı zamanda kurumsal dönüşümü, kamusal alanın yeniden tanımlanmasını ve vakıf temelli mekânsal organizasyonun aşamalı çözülüşünü izlemeye imkân tanıdığını göstermektedir. Yapılar korunmuş; kubbeler ve minareler onarılmış, meydan temizlenmiş ve yollar düzenlenmiştir. Ancak bu müdahalelerle birlikte külliyeyi bir bütün hâlinde ayakta tutan işlevsel ve kurumsal bağlar zayıflamış; her bir yapı birimi, farklı idari ve toplumsal ihtiyaçlar doğrultusunda yeniden tanımlanmıştır.

Arşiv belgelerinde izlenen keşifler, masraf tabloları ve idari yazışmalar, külliyenin zaman içinde tekil ve bütüncül bir vakıf organizasyonu olarak değil; farklı idari aktörlerin müdahale ettiği, teknik ve mali açıdan parçalı bir mekânsal sistem olarak ele alındığını ortaya koymaktadır. Bu süreçte cami ibadet işlevini sürdürmüş; ancak onu çevreleyen birimler ve dış mekân, giderek vakıf mantığından uzaklaşarak şehir idaresinin doğrudan tasarrufuna girmiştir. Dolayısıyla Beyazıt Külliyesi, klasik külliye-merkezli mekânsal organizasyondan modern kamusal alan düzenine geçişin ani ve dramatik bir kopuşla değil; onarım, düzenleme ve yeniden işlevlendirme pratikleri üzerinden izlenebilen uzun erimli, katmanlı ve kurumsal süreklilikler içinde gerçekleştiğini belgeleyen güçlü bir tarihsel örnek olarak değerlendirilebilir. Bu yönüyle çalışma, Osmanlı şehir mekânında kamusallığın modernleşmesini açıklamak için mimari tipolojiler kadar, idari ve teknik belgelerin de vazgeçilmez bir analitik kaynak sunduğunu göstermektedir.

EĞİTİM YAYINEVİ GRUBU

This study makes a noteworthy contribution by addressing scheduling components—often treated separately in the literature—from an integrated perspective. The findings indicate that AI-based scheduling approaches provide practically applicable and effective solutions for modern communication and computing systems.

optimizasyon yöntemleri kullanılabilse de modelin doğruluk değerinde düşüşler meydana gelebilmektedir. Bu dezavantaj için doğruluk değer kaybını en az etkileyecek çözüm yöntemleri bulunmalıdır.

YOLO algorithms have produced effective results in different usage areas. This situation demonstrates the usability of deep learning algorithms in autonomous vehicles.

Unmanned Aerial Vehicles Target Detection

In the study conducted by Saygılı and Özmen [23], object detection was performed by looking at the suitability of learned visuals with images taken by UAV using SSD MobileNet, which is a convolutional neural network model among deep learning models. In this study, a 69.45% mAP average precision value was obtained.

Using an unmanned aerial vehicle, object detection was performed by descending with movement in the X, Y, Z axes. Unlike traditional image processing techniques, moving target detection was performed using deep learning models. Faster R-CNN was used as the deep learning model. Vehicle classification and pedestrian detection processes were carried out to find solutions to some problems in traffic using a camera on the unmanned aerial vehicle. Using YOLOv5, one of the object detection algorithms used in deep learning, the mean average precision value (mAP) was found to be 0.9 [24].

Images taken from the unmanned aerial vehicle tried to detect objects that are circular in shape and red in color. Image processing techniques were realized from the OpenCV module in the Python application. Here, color thresholding and additional filtering methods were used [25].

CONCLUSION

The process of object detection from images falls into the field of computer vision. Significant developments have occurred in object detection with the combination of computer vision and deep learning algorithms. First of all, before giving the raw image we have to the method we want to use, it is brought to a usable state using image processing techniques. Then, the stage of target recognition operations from the image is started. Target detection from images and object recognition operations are used in many areas such as autonomous vehicles, unmanned aerial vehicles, thermal cameras, and military vehicles. Various methods are used in object detection. Traditional methods such as Haar, SIFT, HOG can be used. The use of deep learning algorithms from developing modern methods appears with high accuracy rates. CNN, two-stage R-CNN, Fast R-CNN, Faster R-CNN models and single-stage methods such as YOLO, SSD are used in target detection and object recognition operations in deep learning models. Among these algorithms, YOLO and SSD models stand out compared to other models in terms of processing speed. However, negativities experienced in operations such as challenging weather conditions and detection of small objects in high regions are disadvantages. Very low resolutions or noise can negatively affect object detection operations. Improvements should be made in the detection and recognition of small objects in unmanned aerial vehicles and autonomous vehicles. Improvements should also be made regarding the difficulties experienced in object recognition systems in cameras, especially in challenging weather conditions.

threats demonstrate that material-based solutions to asymmetric threats encountered in the defense industry are becoming increasingly important.

Looking ahead, the role of CFRP in the defense industry is expected to evolve from single-function structural material to multifunctional, smart, and integrated systems. The development of nanocomposites, smart coatings, and hybrid structures enables the integration of features such as structural health monitoring, electromagnetic control, and ballistic resistance within a single material system. In addition, sustainability and recycling issues have become an integral part of long-term strategic planning, especially for the defense industry.

In summary, the importance of CFRP in the defense industry is not limited to enhancing the performance of existing platforms. These materials are among the fundamental building blocks that shape the design philosophy of future defense technologies, support strategic independence, and enable the development of high value-added systems. This compilation aims to provide a comprehensive reference framework for future research and technological developments in CFRP-based defense applications.

Number of Bottles Required = 1500 grams / 20 grams/bottle = 75 bottles

Assuming 40% efficiency, the number of bottles to be used will be approximately 190.

If a low efficiency of 20% is assumed, the number of PET bottles to be used will be around 375.

RESULTS AND DİSCUSSİONS

This research theoretically investigates the development of carbon fiber-like composite fibers from waste PET material. The study evaluates the fundamental suitability of the processes to be employed in practice and the required quantity of material. For instance, calculations indicate that to create a composite sheet measuring approximately 1 square meter in area and 1 mm in thickness, between 180 and 400 0.5-liter PET bottles would need to be processed under realistic conditions. This calculation takes into account the low carbonization yield (20-40%), which is a significant challenge in producing carbon fiber from PET [1, 16].

According to theoretical expectations, the incorporation of sulfonic acid (-SO_3H) groups into the PET polymer chains through sulfonation will suppress the material's melting behavior and enhance its thermal stability. This aligns with studies demonstrating high stabilization efficiency achieved through sulfonation in other thermoplastic polymers like polyethylene [4, 5]. The subsequent conversion of sulfonated PET (S-PET) into fiber form via electrospinning, which has been successfully reported in the literature for both PET [2] and sulfonated polymers [6], is expected to enable the fibers to acquire a highly oriented morphology. This oriented structure is associated with better mechanical performance in electrospun nanofibers [3, 15].

The mechanical properties of the composite fibers obtained after carbonization could theoretically reach or exceed the performance of fibers produced from PET and asphaltene blends, which have been reported to have a tensile strength of ~0.29 GPa [1]. Furthermore, the presence of sulfonic acid groups, whose confirmation is anticipated via FTIR analysis [6, 9], is expected to further enhance the final mechanical performance of the composite material by improving the interfacial adhesion between the fiber and the polymer matrix [8]. In conclusion, this theoretical framework provides an energy-efficient and environmentally friendly roadmap for converting waste PET into high- value-added composite materials.

Bu algoritmalar genellikle:

- Girdi verisinin analizi,
- Özellik çıkarımı veya anomali tespiti,
- Modelin değerlendirme yapması,
- Belirli eşik değerlerine göre karar verilmesi,
- Çıktı üretimi

şeklinde ilerler.

Yapay zeka tabanlı yangın algoritmaları, veri yoğun ortamlarda hızlı karar verebilmek üzere tasarlanmış olup; zaman serisi analizi, görüntü işleme ve sınıflandırma yöntemleriyle desteklenmektedir [1], [4], [6].

SONUÇLAR VE TARTIŞMALAR

Yapay zeka teknolojilerinin yangınla mücadele alanında kullanımı, hem erken tespit hem de karar destek mekanizmaları açısından önemli bir dönüşüm oluşturmaktadır. Çalışmada sunulan teorik incelemeler, makine öğrenmesi, derin öğrenme, IoT tabanlı sensör ağları ve bilgisayarlı görü yöntemlerinin yangın tespitini hızlandırdığını, yayılımın tahmin edilmesine katkı sağladığını ve müdahale stratejilerinin daha verimli şekilde planlanmasına imkan tanıdığını göstermektedir. Bu yöntemler sayesinde, geleneksel gözlem temelli yaklaşımlara kıyasla daha hızlı reaksiyon verme, geniş alanları aynı anda izleme ve çok kaynaklı veri üzerinden yüksek doğrulukta analiz yapabilme olanakları ortaya çıkmaktadır.

Tartışma kapsamında, yapay zeka tabanlı sistemlerin özellikle sensör verileri, uydu görüntüleri ve kamera kayıtlarının bütünleşik olarak analiz edilmesinde büyük potansiyel taşıdığı görülmektedir. Bununla birlikte, veri kalitesi, hesaplama maliyeti, gerçek zaman gereksinimi ve modellerin açıklanabilirliği gibi çeşitli zorluklar uygulama sürecinde öne çıkmaktadır. Çalışmanın genel değerlendirmesine göre, bu teknolojilerin sahada etkin biçimde kullanılabilmesi için hem teknik altyapının güçlendirilmesi hem de algoritmaların daha güvenilir, hızlı ve ölçeklenebilir hale getirilmesi gerekmektedir.

Gelecek çalışmalar incelendiğinde, derin öğrenme tabanlı hibrit yayılım modelleri, drone destekli izleme sistemleri, geniş ölçekli IoT sensör ağları, bulut bilişim ve dijital ikiz uygulamalarının yangınla mücadele alanında önemli geliştirme fırsatları sunduğu görülmektedir. Özellikle dronlar ve uydu tabanlı görüntüleme teknolojileriyle yapay zekanın entegrasyonu, gerçek zamanlı ve yüksek doğrulukta yangın haritalarının oluşturulmasını sağlayacaktır. Benzer şekilde, kenar bilişim (Edge AI) çözümleri, verilerin sahada işlenmesine imkan tanıyarak gecikmeleri azaltacak ve erken uyarı sistemlerinin daha güvenilir hale gelmesine katkıda bulunacaktır.

Sonuç olarak, bu çalışma yangınla mücadelede yapay zeka yöntemlerinin hem mevcut durum hem de geleceğe yönelik gelişme potansiyeli açısından kritik bir role sahip olduğunu ortaya koymaktadır. Yapay zekanın hızlı, ölçeklenebilir ve çok kaynaklı veri işleme yeteneği, afet yönetiminin geleceğini şekillendiren temel unsurlardan biri haline gelmiştir. Disiplinler arası iş birlikleri ve teknolojik yenilikler ile birlikte, yapay zeka destekli yangın yönetim sistemlerinin daha güvenli, daha hızlı ve daha etkin stratejiler sunması beklenmektedir.

- Bounding-box çıkarımı: "Nesne görüntünün neresinde?"
- Segmentasyon (opsiyonel): Nesnenin sınırlarını piksel olarak çıkarma.

YOLOv8'in avantajı tek geçişte (You Only Look Once) hızlı ve gerçek zamanlı tespit yapar.

Radar ve LiDAR sensörlerinin birlikte değerlendirilmesi ise özellikle düşük görüş koşullarında kritik rol oynayacaktır; bu amaçla radarın Doppler bilgisi, LiDAR nokta bulutu kümeleri ile birleştirilerek hareketli hedeflerin sağlam ve kararlı şekilde tespit edilmesi hedeflenmektedir. KBRN tehditleri için tasarlanan gaz sensörü modülünde ise eşik tabanlı bir anomali algılama sistemi kullanılacak ve ortamda ani gaz artışları uyarı olarak işlenecektir.

Robotun otonom hareket edebilmesi için navigasyon ve rota planlama sisteminin de bütünsel bir şekilde tasarlanması gerekmektedir. Bu doğrultuda, robotun bilinmeyen bölgelerde haritalama yapabilmesi amacıyla LiDAR–IMU tabanlı LOAM SLAM algoritması kullanılacak; küresel rota planlama için A* algoritması (küresel rota planlayıcı), dinamik engellerden kaçınmak için ise DWA (Dynamic Window Approach) (yerel engel kaçınma algoritması) tercih edilecektir.

Çoklu robot görevlerinde UGV–UAV koordinasyonunun sağlanabilmesi için UWB tabanlı konum paylaşımı ve eş zamanlı harita birleştirme yaklaşımının uygulanması planlanmaktadır. Bu bütünleşik yapı sayesinde robotun hem bilinmeyen ortamlarda harita çıkarabilmesi hem de algıladığı tehditlere karşı güvenli ve verimli bir rotayı otomatik olarak oluşturabilmesi hedeflenmektedir.

SONUÇLAR VE TARTIŞMA

Bu çalışma, saha taraması ve tehdit tespiti görevlerinde otonom tespit robotlarının performansını artırmak amacıyla çoklu sensör füzyonuna dayalı bir sistemin tasarımını ve deneysel uygulamasını sunmaktadır. Kurulan sistem, LiDAR, EO/IR kamera, radar, GNSS/IMU ve gaz sensörleri gibi farklı sensörleri entegre ederek hem sabit hem de hareketli tehditleri farklı çevresel koşullarda tespit edebilmektedir. Sensörlerden elde edilen verilerin ön işleme ve füzyon süreçleri sayesinde tek bir sensöre bağımlı kalınmadan daha güvenilir ve doğru çevresel bilgi sağlanmıştır.

Deneysel prototip, düz zemin, engebeli arazi, dar geçitler, düşük ışık ve sisli koşullar gibi çeşitli senaryolarda test edilmiştir. Elde edilen sonuçlar, LiDAR ve radar entegrasyonunun özellikle düşük görüş koşullarında hareketli hedef tespitinde kritik bir rol oynadığını, EO/IR kameraların ise görsel tehditlerin tanınmasında yüksek doğruluk sağladığını göstermiştir. GNSS–IMU ve SLAM tabanlı navigasyon sistemi, robotun bilinmeyen ortamlarda haritalama yapabilmesini ve güvenli rota planlamasını mümkün kılmıştır. KBRN sensörleri ile gerçekleştirilen gaz algılama modülü, anomali tabanlı uyarılar ile çevresel tehditlerin hızlı şekilde tanımlanmasını sağlamıştır.

Sonuç olarak, tasarlanan çoklu sensörlü sistem, farklı arazi ve çevre koşullarında otonom robotun hem saha taraması hem de tehdit tespit görevlerini güvenilir ve etkin biçimde yerine getirmesine imkân tanımaktadır. Sistem, düşük maliyetli, modüler ve farklı robot platformlarına uyarlanabilir bir altyapı sunmaktadır. Bu çalışma, otonom robotların değişken çevresel koşullarda performansını değerlendirmek ve gelecekte çoklu robot işbirliği ile görev başarımını artırmak için bir temel oluşturacaktır.

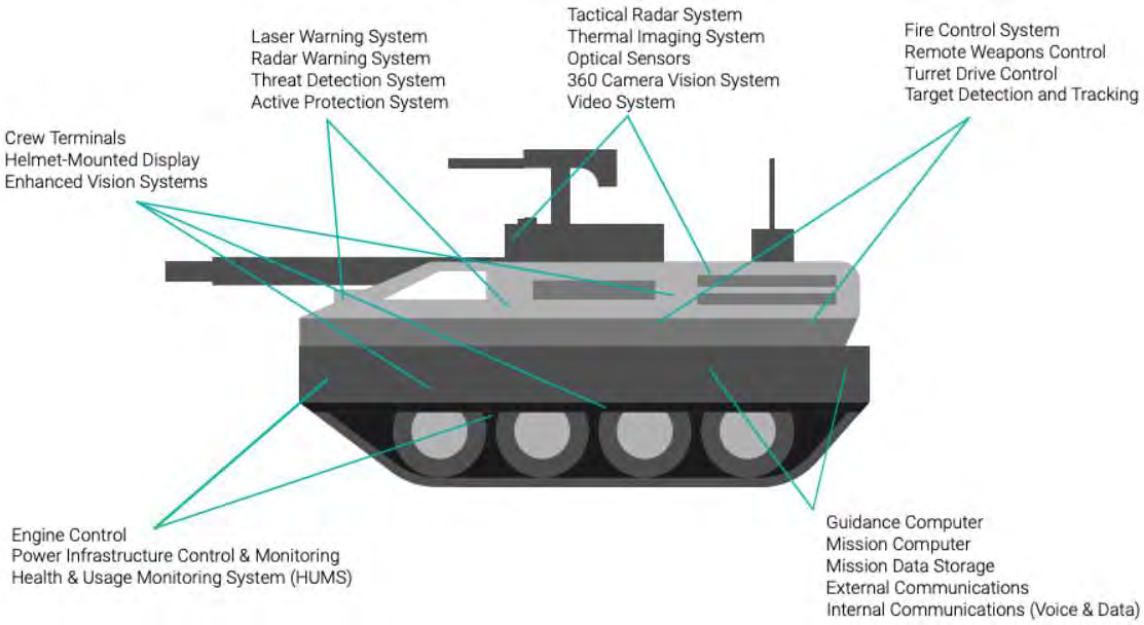
Sağlanan avantajlar arasında düşük ısı/akustik imza ile keşif güvenliği ve düşman tanımada süreklilik sayılabilir[20][33]. Yüksek tork kontrollü tahrik, araç çevikliğini artırmaktadır. Açık mimari standartları sayesinde farklı sistem modülleri birbiriyle uyumlu çalışmaktadır[2][3]. Yapay zekâ destekli algoritmalar, komuta-merkezi karar süreçlerine değerli bilgi akışı sağlamaktadır[12]. Özetle, bu teknolojiler muharebe taktiklerini güçlendirmekte ve çoklu platform entegrasyonunu kolaylaştırmaktadır.



Şekil 3. Primary systems in a battle tank

Gelecekteki çalışmalar şunları içerebilir: Batarya teknolojileri ve yakıt hücrelerinin kullanımı ile enerji yoğunluğunun iyileştirilmesi; otonomluk seviyesinin (TA seviyesi) artırılması ve çoklu araç/sensör sistemleri arası koordinasyonun geliştirilmesi; siber güvenlik ve yapay zekâ tabanlı hataya dayanaklı karar modüllerinin güçlendirilmesi[2][12]. Ayrıca MOSA (Modüler Açık Sistem Yaklaşımı) kapsamında FACE/SOSA standartlarıyla tam uyumlu yazılım platformları geliştirilmelidir. Çoklu araç ve komuta kontrol sistemlerinin entegre çalışması (JADC2 gibi) için gerçek zamanlı veri füzyonu ve yapay zekâ destekli muharebe yönetim sistemleri daha da önem kazanacaktır[1][10]. Sonuç olarak, otonom kara platformlarında elektrifikasyon ve yazılım entegrasyonu, yüksek performanslı ve çok yönlü savunma çözümleri sunmakta olup, bu alanda yapılacak mühendislik çalışmaları stratejik değerini sürdürmektedir.

FNSS aracılığıyla ısı yönetimi için makine öğrenimi teknolojileri geliştirme planları mevcuttur. Sinir ağları ve takviyeli öğrenmenin çarpan optimizasyonuyla entegrasyonu da gelecekteki iş planlarında araştırılabilir. Daha gelişmiş EMS stratejileri ve bunlarla yapay zekanın entegrasyonu da önerilmektedir.[27]. Ayrı olarak, araç yardımcı sistemlerinin (Torpedo Trophy, kule tahrikleri vb.) elektrifikasyonu ve bu sistemler için akıllı enerji yöneticileri (örn. Leopard 2A8 SSPDB) önem kazanmaktadır[30][28]. Gelecekte, daha büyük kapasiteli ünitelerin kullanımını veya hidrojen elektrolizi veya yakıt hücreleri gibi modern teknolojiler kullanan alternatif şarj altyapılarının geliştirilmesini görebiliriz. Ayrıca, batarya kimyasındaki gelişmeler sayesinde tamamen elektrikli araçların yaygın olarak benimsenmesine de tanık olabiliriz. Bu çalışmada ele alınan simülasyon ve kontrol yöntemleri, paletli hibrit araçların performansını artırmada önemli bir rol oynamakta ve pratik testler ile otonom sürüş entegrasyonunu gelecekteki araştırmalar için bir öncelik haline getirmektedir.

supervised veya geometrik derin öğrenme teknikleri incelenecektir. Son yıllarda, monoküler kameralardan uzaklık tahmini için sinir ağlarının ve özellikle self-supervised öğrenme yöntemlerinin kullanımı bir eğilim haline gelmiştir (Liang vd., 2022).

6. Geniş Ölçekli Doğrulama: Sistemin performansının gerçek dünya koşullarında, farklı otonom mobil platformlarda (örneğin insansız hava araçları veya Endüstriyel AGV'ler) uzun süreli operasyonel testlerle doğrulanması ve sistemin genelleştirilebilirliğinin artırılması hedeflenmektedir.

This situation can lead to overheating of the system during high-performance maneuvers. Therefore, EHA design should be addressed not only as a hydraulic but also as a thermal optimization problem.

In this study, Electro-Hydrostatic Actuator (EHA) technology, which plays a critical role in line with the aviation industry's More Electric Aircraft (MEA) vision, was examined comparatively with traditional Servo-Hydraulic (SHA) and Electro-Mechanical (EMA) systems. The analyses performed show that the Power-on-Demand principle offered by EHA systems significantly increases total energy efficiency by minimizing parasitic energy losses caused by continuous pressurization in central hydraulic systems. Additionally, the structural simplification and weight savings achieved by eliminating central pipelines, valve blocks, and reservoirs directly contribute to the aircraft's payload capacity. The modular structure of the system optimizes flight safety and maintenance processes by preventing a fault from spreading to other systems in case of a possible failure. However, it has been determined that the most prominent constraint in front of the widespread use of EHA technology is the thermal management difficulties arising from its closed-loop hydraulic structure. In light of current findings, it is recommended that future studies focus on the development of active cooling systems integrated into the actuator body and high-heat-resistant hydraulic fluids. Consequently, it is foreseen that with the overcoming of thermal bottlenecks, EHA technology, offering high power density and reliability, will become the primary actuator standard in future aviation and space systems.

bulgular, sürü yapılarının tekil platformlara kıyasla daha geniş alan kapsaması sağladığını ve görev başarımını artırabildiğini göstermektedir.

Mevcut çalışmalar incelendiğinde, dağıtık kontrol mimarilerinin merkezi kontrol yaklaşımlarına kıyasla daha yüksek hata toleransı sunduğu dikkat çekmektedir. Merkezi sistemlerde tek bir kontrol biriminin devre dışı kalması tüm görevin başarısızlıkla sonuçlanmasına neden olabilmekteyken, dağıtık mimarilerde bu risk önemli ölçüde azalmaktadır. Simülasyon tabanlı araştırmalar, sürü içerisindeki bazı ajanların kaybı veya iletişim dışı kalması durumunda dahi sistemin görevine sınırlı performans kaybı ile devam edebildiğini ortaya koymaktadır. Bu durum, sürü sistemlerinin görev sürekliliği açısından önemli bir avantaj sunduğunu göstermektedir.

Literatürde yer alan dinamik görev senaryolarına yönelik çalışmalar, sürü yapılarının çevresel değişimlere ve görev önceliklerine hızlı biçimde uyum sağlayabildiğini vurgulamaktadır. Görevlerin önceden sabit olarak tanımlandığı statik yapılar yerine, anlık duruma göre yeniden planlama yapabilen dağıtık ve hibrit yaklaşımların daha başarılı sonuçlar verdiği bildirilmektedir. Bu bağlamda, sürü sistemlerinin adaptasyon yeteneği modern harp ortamlarının gereksinimleriyle yüksek düzeyde örtüşmektedir.

Haberleşme altyapısının sürü performansı üzerindeki belirleyici rolü, literatürde sıklıkla vurgulanan bir diğer önemli unsurdur. İncelenen çalışmalarda, haberleşme gecikmeleri, paket kayıpları ve bağlantı kopmalarının sürü içi koordinasyonu doğrudan etkilediği belirtilmektedir. Özellikle yoğun elektronik harp ortamlarında gerçekleştirilen simülasyonlarda, tek bantlı ve merkezi haberleşme yapılarının yetersiz kaldığı görülmektedir. Buna karşılık, çok bantlı ve yedekli haberleşme mimarilerinin, görev başarım oranını anlamlı düzeyde artırdığı rapor edilmektedir. Bununla

birlikte, her ne kadar çok bantlı ve dağıtık haberleşme yaklaşımları dayanıklılığı artırsa da, yüksek veri trafiği ve senkronizasyon gereksinimleri sistem üzerinde ek yükler oluşturmaktadır. Literatürde bu durumun, veri önceliklendirme ve seçici veri paylaşımı mekanizmaları ile dengelenmeye çalışıldığı görülmektedir. Bu yaklaşımlar, kritik kontrol verilerinin zamanında iletilmesini sağlarken, daha düşük öncelikli verilerin ağ üzerindeki yükünü azaltmayı amaçlamaktadır.

Enerji yönetimi ve görev süresi optimizasyonu, otonom sürü sistemlerinin karşılaştığı temel sınırlamalar arasında yer almaktadır. İncelenen çalışmalarda, ajanların sınırlı enerji kaynaklarına sahip olması nedeniyle görev planlama süreçlerinin enerji farkındalıklı olarak ele alınmasının gerekliliği vurgulanmaktadır. Ajanlar arası görev paylaşımı ve yük dengeleme algoritmalarının, sürü genelinde görev süresini uzatabildiği ve operasyonel verimliliği artırabildiği bildirilmektedir.

Son olarak, literatürde tamamen otonom silah sistemlerine ilişkin etik ve hukuki tartışmaların önemli bir yer tuttuğu görülmektedir. Birçok çalışmada, karar alma süreçlerinde insan unsurunun tamamen devre dışı bırakılmasının çeşitli riskler barındırdığı ifade edilmektedir. Bu nedenle insan-denetimli otonomi yaklaşımının, mevcut ve yakın vadeli uygulamalarda daha gerçekçi ve kabul edilebilir bir çözüm olarak öne çıktığı belirtilmektedir. Bu yaklaşım, otonom sürü sistemlerinin sağladığı teknik avantajları korurken, karar süreçlerinde insan kontrolünü muhafaza etmeyi amaçlamaktadır. Genel olarak değerlendirildiğinde, literatürde yer alan çalışmalar otonom sürü sistemlerinin modern harp ortamlarında önemli avantajlar sunduğunu ortaya koymaktadır. Ancak bu sistemlerin etkin ve güvenli biçimde kullanılabilmesi için haberleşme, enerji yönetimi, güvenlik ve etik boyutların birlikte ele alınması gerektiği açıkça görülmektedir.

user authentication.

- Integration with autonomy and perception remains an open frontier. Many existing systems operate in teleoperation mode, where gestures directly control low-level motion. A more scalable paradigm would use gestures for high-level commands ("go to that region", "inspect this object", "circumnavigate the obstacle"), while onboard autonomy handles local navigation and obstacle avoidance. This integration between human intent and autonomous perception is particularly relevant for UGVs operating in complex, dynamic environments.

güvenliğine ilişkin matematiksel modeller, göreceli hız ve reaksiyon süresinin çarpışma mesafesi üzerindeki etkisini tanımlamakta ve füzyonlu sistemlerde hata payının azalmasıyla güvenlik seviyesinin yükseldiğini göstermektedir (18).

Önerilen sistem tasarımı doğrultusunda sensör katmanı, ön işleme birimi, füzyon çekirdeği ve yapay zekâ karar modülü içeren modüler mimarinin hem mühendislik olarak uygulanabilir hem de literatürle uyumlu olduğu görülmüştür (12)(19). Sistem çıktılarının tehdit değerlendirme, nesne takibi ve çarpışma önleme gibi görevlerde kullanılabilir olduğu ve gerçek zaman işlem gereksinimlerini karşılayabildiği anlaşılmaktadır. Özellikle FPGA tabanlı çözümler ile 60 FPS seviyesinde gerçek zamanlı füzyon performansı elde edilebilmesi, otonom platformlarda ileri seviye operasyonların mümkün olduğunu göstermektedir (12).

Gelecek çalışmalar açısından, adaptif ağırlıklandırma mekanizmaları, meta-öğrenme tabanlı dinamik füzyon yapıları, dağıtık mimariler, çoklu modalite Transformer çözümleri ve donanım hızlandırıcılar ile optimize edilmiş derin öğrenme modelleri önemli araştırma alanları olarak öne çıkmaktadır (10)(14)(20). Bu alanlarda yapılacak çalışmalar hem mikro ölçekte (İHA, kara araçları, robotik unsurlar) hem de makro ölçekte (stratejik komuta kontrol, istihbarat sistemleri, sınır güvenliği) operasyonel etkinliği artıracaktır.

Bu rapor genel olarak değerlendirildiğinde, çoklu sensör füzyonu ve yapay zekâ tabanlı durumsal farkındalık sistemlerinin modern savunma operasyonlarında yüksek etki yarattığı, karar verme süreçlerini hızlandırdığı ve insan–makine işbirliğini güçlendirdiği sonucuna ulaşılmaktadır. Bu teknolojilerin geliştirilmesi, gelecekte otonom askeri platformların güvenli, hızlı ve etkin bir şekilde kullanılabilmesi için kritik öneme sahiptir.

örtüşmelerinin çözümlenmesinde kritik bir rol üstlenecek; çok boyutlu spektrum modellemeleri, tehdit analizinin zaman içindeki evrimini görünür kılacaktır [8–11]. Yeniden yapılandırılabilir alıcı–verici mimariler ve gelişmiş sayısal işleme yapıları ise, elektronik destek ve elektronik taarruz işlevlerinin tek platformda bütünleşmesine olanak tanıyarak görev esnekliğini artıracaktır [12–14].

Yarı iletken teknolojilerindeki ilerlemeler, özellikle galyum nitrür tabanlı yüksek güç yükselteçlerinin olgunlaşması, geniş bant elektronik taarruzun etkinliğini önemli ölçüde artırmakta; radarların gelişmiş işaret işleme yöntemlerine rağmen karıştırma ve aldatma sinyallerinin daha gerçekçi ve daha kararlı biçimde uygulanmasını mümkün kılmaktadır [15–17]. Bununla birlikte çoklu platform mimarilerine dayanan dağıtık elektronik harp yapıları, geniş coğrafi alanlarda eşgüdümlü baskılama ve aldatma stratejilerinin geliştirilmesine izin vererek, radar ağlarının bütüncül işleyişine yönelik daha etkili karşı tedbirler sunmaktadır [18–20].

Bu dönüşümün en belirgin hızlandırıcısı yapay zekâ tabanlı karar yapılarıdır. Geniş bant verilerin yüksek hacmi, karmaşık sinyal istatistikleri ve radar davranışındaki hızlı değişimler, klasik işleme yöntemleriyle analiz edilmesi güç yapılar oluşturmaktadır. Yapay zekâ modelleri, bu karmaşıklığın üstesinden gelmek için yüksek boyutlu veri kümelerini işleyebilen güçlü bir hesaplama altyapısı sunmakta; yayıcı kümelendirme, sinyal sınıflandırma, parametre takibi ve tehdit davranışı tahmini gibi görevlerde belirgin üstünlük sağlamaktadır [21–24]. Yapay zekâ destekli elektronik harp sistemlerinin gelecekte yalnızca değerlendirme yapan araçlar olmaktan çıkarak, tehdit davranışını öngören ve karşı tedbiri önceden şekillendiren öngörüsel yapılara dönüşeceği öngörülmektedir [25, 26].

Kuantum temelli algılama yöntemleri ise elektronik harp rekabetini fiziksel düzeyde yeniden tanımlama potansiyeline sahiptir. Dolanıklığa dayalı algılama teknikleri, klasik radarların ulaşmakta zorlandığı sinyal–gürültü seviyelerinde dahi hedef tespitine imkân verebilecek bir çerçeve sunmakta; buna karşılık dolanıklık yapısının bozulmasına yönelik karşı tedbirler, geleceğin elektronik harp stratejilerini kuantum fiziğinin temel ilkelerine kadar derinleştirmektedir [27–29]. Her ne kadar mühendislik sınırlamaları nedeniyle kısa vadede operasyonel uygulamalar sınırlı görünse de, uzun vadede kuantum tabanlı sistemlerin radar–EH dengesini köklü biçimde etkileme potansiyeline sahip olduğu değerlendirilmektedir [30].

Genel olarak değerlendirildiğinde, elektronik harp sistemlerinin evrimi çok katmanlı bir teknolojik bütünleşmeye işaret etmektedir. Geleceğin EH mimarisi; öğrenebilen, uyarlanabilen, otonom karar verebilen, fiziksel katmanlara kadar etki edebilen ve tehdit davranışını öngörebilen sistemlerden oluşacaktır [31–33]. Bu dönüşüm, yalnızca elektromanyetik ortamın dinamiklerine uyum sağlama çabası değil, aynı zamanda elektronik harp ile radar teknolojileri arasında çok daha sofistike, karşılıklı evrime dayalı bir rekabet döngüsünün başlangıcıdır. Bu bağlamda elektronik harp sistemlerinin, geleceğin harekât ortamında hem taktik hem de stratejik düzeyde belirleyici bir rol oynayacağı; bu rolün de mühendislik, doktrin ve konsept düzeyinde yeniden tanımlanacağı açıktır [34–36].

SONUÇ

Bu raporda, dijital hareketli harita sistemleri üzerinde çalışan yapay zekâ tabanlı İHA/UAV rota optimizasyonu konusu, son yıllarda Türkiye'de ve dünyada yapılmış en az yirmi akademik çalışma ışığında ele alınmıştır. Öncelikle İHA görev ve rota planlama probleminin teorik temelleri, GSP, ARP ve Oryantiring problemleri çerçevesinde açıklanmış; ardından çok amaçlı optimizasyon kavramı ve ε-kısıt yaklaşımı gibi yöntemler tartışılmıştır [1],[3],[9],[14].

Literatür incelemesi, İHA'ların afet yönetimi, bölgesel keşif, kargo teslimatı, tarımsal uygulamalar ve havayolu lojistiği gibi oldukça farklı alanlarda kullanıldığını; ancak bu alanların tamamında rota optimizasyonunun kritik bir rol oynadığını göstermektedir [2],[4],[7],[10],[11],[17]. Çalışmalarda, klasik matematiksel modellerin yanında genetik algoritmalar, parçacık sürü optimizasyonu, karınca kolonisi ve kümeleme tabanlı hibrit yaklaşımlar gibi meta-sezgisel yöntemler yoğun olarak kullanılmaktadır [1]–[4],[7],[14].

Önerilen sistem yapısı, literatürdeki bu farklı yaklaşımları tek bir çatı altında birleştirerek:

- Girdi katmanında dijital harita, hedef ve İHA parametrelerini,
- Ara katmanda çok amaçlı matematiksel modeli ve meta-sezgisel çözüm motorlarını,
- Çıktı katmanında ise görev planları ve rota listelerini

birlikte ele almaktadır. Böylece sistem, hem akademik deneyler hem de gelecekteki gerçek saha uygulamaları için kullanılabilecek esnek ve modüler bir mimari sunmaktadır.

Sonuç olarak, İHA/UAV rota optimizasyonu, yalnızca teknik bir optimizasyon problemi değil, aynı zamanda lojistik verimlilik, afetlere hazırlık, sürdürülebilirlik ve dijital dönüşüm boyutları bulunan çok disiplinli bir araştırma alanıdır. Bu raporda sunulan teorik ve yazılımsal çerçeve, ileride yapılacak tez, makale ve saha projeleri için kapsamlı bir başlangıç noktası niteliğindedir.

gradyentler çatlak oluşum riskini artırmaktadır [18,21]. Bu bulgular, SLM sürecinde defekt ve mikroyapı kontrolünün ancak çok değişkenli ve bütüncül bir optimizasyon yaklaşımıyla mümkün olduğunu açıkça ortaya koymaktadır [33].

SONUÇ

Bu çalışmada, Selective Laser Melting (SLM) sürecinde metal parçalarda meydana gelen başlıca metalurjik defekt türleri ve bu defektlerin oluşum mekanizmaları, literatürde raporlanan deneysel, teorik ve sayısal çalışmalar ışığında bütüncül bir yaklaşımla incelenmiştir. Elde edilen bulgular, SLM sürecinde defekt oluşumunun tekil bir işlem parametresiyle açıklanamayacağını; lazer gücü, tarama hızı, hatch mesafesi, katman kalınlığı, toz morfolojisi ve termal döngüler arasındaki karmaşık etkileşimlerin ortak bir sonucu olduğunu açıkça ortaya koymaktadır.

Yetersiz birleşme defektlerinin düşük enerji yoğunluğu koşullarında, anahtar deliği porozitesinin ise aşırı enerji girdisine bağlı olarak geliştiği; gaz porozitesinin büyük ölçüde toz kalitesi ve yüzey oksitleriyle ilişkili olduğu görülmüştür. Ayrıca yüksek soğuma hızları ve keskin termal gradyentlerin, sütunsal tane yapılarının oluşumunu teşvik ederek mikroyapısal anizotropiye ve katılaşma çatlaklarına zemin hazırladığı literatür bulguları ile desteklenmiştir. Bu durum, özellikle güvenlik kritik uygulamalarda SLM ile üretilen parçaların mekanik güvenilirliğini sınırlayan temel faktörlerden biri olarak öne çıkmaktadır.

Çalışma kapsamında ele alınan process–structure–property ilişkisi, SLM sürecinde mikroyapı ve mekanik özelliklerin doğrudan erime havuzu kararlılığı ve termal davranışla bağlantılı olduğunu göstermiştir. Sayısal modelleme ve erime havuzu simülasyonları, enerji yoğunluğundaki küçük değişimlerin dahi defekt türü ve dağılımı üzerinde belirleyici etkilere sahip olduğunu ortaya koymaktadır. Bu bağlamda, SLM süreç optimizasyonunun yalnızca deneysel deneme–yanılma yaklaşımlarıyla değil, fizik temelli ve çok değişkenli optimizasyon stratejileriyle ele alınması gerektiği anlaşılmaktadır.

Sonuç olarak bu derleme, SLM sürecinde defekt oluşumuna neden olan temel metalurjik mekanizmaları sistematik bir çerçevede ortaya koyarak literatürdeki dağınık bilgileri bütüncül biçimde sentezlemiştir. Elde edilen değerlendirmelerin, gelecekte gerçekleştirilecek deneysel çalışmalar, gelişmiş süreç izleme sistemleri ve yapay zekâ tabanlı optimizasyon yaklaşımları için sağlam bir bilimsel altyapı sunacağı düşünülmektedir. Bu yönüyle çalışma, SLM teknolojisinin daha kararlı, güvenilir ve endüstriyel ölçekte uygulanabilir hâle getirilmesine katkı sağlamayı hedeflemektedir.

Precision, Recall, F1-score, görüntü tabanlı tespit için mAP, ikili sınıflandırmalar için ROC–AUC, hata analizleri için confusion matrix, radar/RF için detection delay ve tracking RMSE, işaretleyici doğruluğu için hit rate ve MSE. Bu metrik seti, hem görüntü tabanlı CNN modellerinin hem de radar/RF sinyal işleme yöntemlerinin kapsamlı şekilde değerlendirilmesini sağlamaktadır.

Deneysel Protokol

Deneysel çalışma iki aşamada yürütülecektir: laboratuvar (HIL) testleri ve açık saha uygulamaları. HIL aşamasında, SDR tabanlı RF sinyalleri, radar mikro-Doppler simülasyonları ve EO/IR kamera akışları gerçek zamanlı olarak sisteme beslenerek sensör–ön işleme–CNN–füzyon–karar verme zinciri doğrulanacak, böylece simülasyon ile gerçek dünya arasındaki fark azaltılacaktır. Açık saha testlerinde ise kontrollü drone uçuşları gerçekleştirilerek doğrusal uçuş, hız değişimleri, zikzak manevraları ve farklı irtifa/mesafe senaryoları incelenecek; her senaryo istatistiksel güvenilirlik için en az 10 tekrar ile uygulanacaktır. Ayrıca sistemin dayanıklılığını değerlendirmek amacıyla sis, yağmur, düşük ışık ve yoğun RF paraziti gibi zorlu çevresel koşullar altında ek testler yapılacaktır.

SONUÇLAR VE TARTİŞMA

Bu çalışma, çoklu sensör tabanlı bir C-UAS sisteminin; radar, EO/IR kamera, RF analizörü, akustik mikrofon dizisi ve LiDAR sensörlerinin birlikte kullanılmasıyla nasıl daha güvenilir ve bütüncül bir drone tespit yaklaşımı sunabileceğini göstermektedir. Literatürde yer alan tekil sensör tabanlı çözümlerin, özellikle küçük boyutlu İHA'ların düşük SNR altında tespit edilmesi konusunda yetersiz kaldığı görülmektedir. Bu nedenle çoklu-modal verilerin birleştirildiği katmanlı mimariler, modern C-UAS senaryolarında gereklilik hâline gelmiştir.

Gerçekleştirilen HIL testlerinde, RF sinyal emülasyonu, radar mikro-Doppler simülasyonları ve EO/IR kamera akışları kullanılarak sistemin uçtan uca performansı doğrulanmıştır. Bu doğrulama, sensör → ön işleme → CNN tabanlı öznitelik çıkarımı → füzyon → tehdit seviyelendirme hattının gerçek zamanlı koşullarda stabil çalıştığını göstermiştir. HIL ortamında yapılan deneylerde özellikle radar ve RF kanallarının düşük SNR altında dahi drone varlığını belirgin şekilde ayırt edebildiği gözlemlenmiştir.

Açık saha testlerinde ise farklı uçuş senaryoları (doğrusal uçuş, hızlanma/yavaşlama, zikzak manevraları ve değişen irtifa-mesafe kombinasyonları) değerlendirilmiştir. EO/IR kamera verisi, görsel doğrulama açısından güçlü bir destek sağlarken, RF analizörü drone kontrol sinyallerini başarıyla tespit etmiş ve radar sensörleri hedefin konum ve hız bilgisini tamamlayıcı şekilde üretmiştir. Testlerde elde edilen sonuçlara göre sensör füzyonu, tekil sensör performansına kıyasla anlamlı bir doğruluk artışı sağlamış, yanlış alarm oranını düşürmüş ve özellikle karmaşık arka planlarda daha istikrarlı tespit yapılmasına imkân tanımıştır.

Çevresel koşul testlerinde (sis, yağmur, düşük ışık ve yoğun RF paraziti) sistemin dayanıklılığı gözlemlenmiş, kötü hava koşullarında EO/IR performansı düşerken radar ve RF kanallarının bu kaybı telafi ettiği görülmüştür. Bu durum, çoklu sensör yaklaşımının operasyonel sahalarda kritik önem taşıdığını doğrulamaktadır.

Sonuç olarak, önerilen C-UAS mimarisi; modüler sensör yapısı, CNN tabanlı öznitelik çıkarımı, sensör füzyon stratejisi ve gerçek zamanlı karar verme mekanizmasıyla yüksek doğrulukta drone tespit ve sınıflandırma kapasitesi sunmaktadır. Sistem maliyet açısından optimize edilebilir, farklı sensör konfigürasyonlarına kolayca uyarlanabilir ve hem HIL hem de saha koşullarında istikrarlı bir performans sergilemektedir. Bu çalışma, çoklu-modal C-UAS çözümlerinin gelecekteki araştırmaları için güçlü bir referans oluşturmakta ve gerçek operasyonel ortamlarda güvenilir kullanım potansiyeli taşımaktadır.

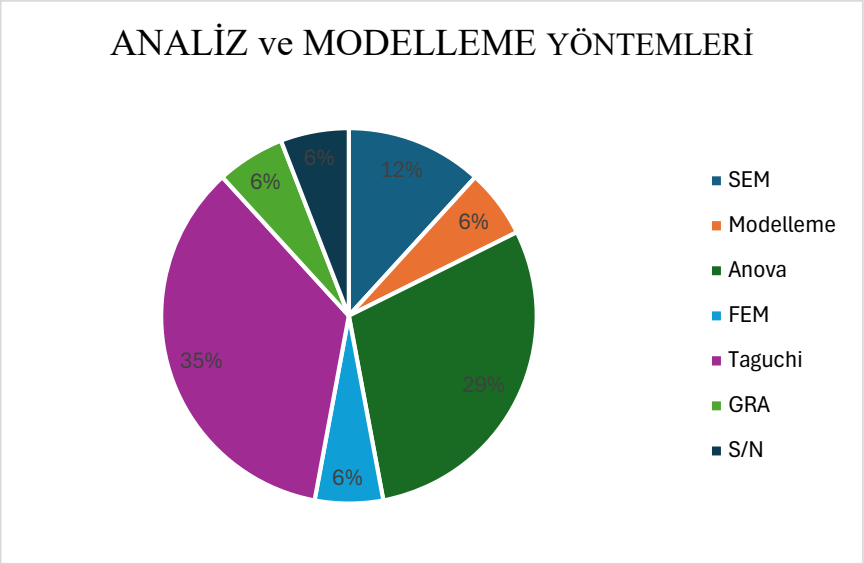
Şekil 6. Literatürde kullanılan malzemelerin dağılımı



Şekil 7. Literatürde kullanılan analiz ve modelleme yöntemleri

SONUÇ

- Savunma sanayi için yapılan çalışmalarda frezeleme ve tornalama işlemi en çok kullanılan talaşlı imalat yöntemidir. Bu işlemler karmaşık şekiller ve yüksek hassasiyet gerektiren toleranslar için yapılmaktadır.
- Araştırmalarda performans iyileştirmesi sürecinde araştırmacılara kolaylık sağladığı için çoğunlukla sayısal ve istatiksel modelleme tekniklerinden Taguchi ve ANOVA kullanılmıştır.
- Talaşlı imalat süreçlerinde kesme kuvveti, yüzey pürüzlülüğü, sıcaklık, takım aşınması çıktılarının üzerinde talaş derinliği, kesme ve ilerleme hızının belirgin bir etkisi olduğu görülmektedir.
- Yüzey pürüzlüğü frezeleme ve tornalama işlemleri için öne çıkarken delik delme ve taşlama işlemlerinde yüzey kalitesi öne çıkmaktadır.
- Taguchi deney tasarım modeli literatürde en çok kullanılan yöntem olmuştur. Bu zaman ve maliyet tasarrufu açısından modelin tercih edilmesiyle açıklanabilir.

Table 3.4. Counterfactual test planning

Result type	Positive result changes	Negative result changes	Indeterminate result changes
RNA fusion test	Therapy or diagnosis may change.	If quality adequate, fusion less likely.	Repeat specimen or alternative method if high suspicion.
Germline test	Counseling, cascade testing, surveillance and sometimes therapy.	May reduce inherited-risk concern but does not erase family history.	Manage as unresolved; reanalysis or segregation may be needed.
ctDNA resistance panel	May guide biopsy, trial or next-line therapy.	If tumor fraction low, does not exclude resistance.	Repeat or tissue testing if management-changing.
Theranostic imaging	May support nuclear medicine evaluation.	May argue against radioligand approach.	Consider alternate imaging or biopsy if discordant.

interpreting plasma-only or old tissue immune markers without checking current specimen and disease state. Pitfall 8: not documenting uncertainty about immune exclusion or microenvironmental resistance.

A safe immune sign-out should name the biomarker, method, tumor type, evidence context, host risk, imaging context and follow-up plan. If any element is missing, the board should state what must be verified before implementation.

Table 8.4. Immune-biomarker safety checks

Safety check	Why it matters	If incomplete
PD-L1 method and score	Determines drug/disease-specific interpretation.	Do not use generic PD-L1 language.
MSI/MMR method	Connects therapy and germline evaluation.	Confirm discordant IHC/PCR/NGS results.
TMB assay and cutoff	Panel and filtering alter value.	Describe as assay-specific and avoid binary overclaim.
Host contraindications	Toxicity can dominate benefit.	Escalate to oncology/subspecialty review.
Imaging pattern	Pseudoprogression is uncommon and context-dependent.	Define re-imaging/biopsy/stop rule.
Resistance biology	HLA/APM or immune exclusion can explain failure.	Consider biopsy/trial rather than PD-L1 repetition.

Table 9.5. Minimum metastatic biology sign-out

Metastatic sign-out item	Minimum wording
Distribution	State organs involved and whether progression is focal, oligoprogressive or diffuse.
Dominant lesion	Name the lesion that drives urgency or uncertainty.
Functional phenotype	State FDG, target-tracer, RAI, SSTR, PSMA or other relevant uptake pattern.
Molecular relevance	State whether molecular data come from primary, metastasis or plasma and whether current.
Biopsy plan	Specify preferred lesion, assays and tissue handling needs.
Decision direction	Observation, local therapy, systemic switch, trial, theranostic therapy or supportive priority.
Follow-up metric	Imaging interval, biomarker, ctDNA, symptom endpoint or toxicity check.

10.12 Teaching vignette

A patient with metastatic adenocarcinoma has liver progression after targeted therapy. The original lung biopsy contained EGFR exon 19 deletion and was treated as metastatic lung adenocarcinoma. A new liver lesion is FDG-avid and grows rapidly while other lesions remain stable. The board receives a ctDNA report showing TP53 and RB1 loss with low EGFR signal. The correct board action is not simply to change to a new targeted therapy. The pathology anchor is missing: the progressing lesion should be biopsied if safe to assess transformation, small-cell/neuroendocrine phenotype, tumor content and resistance mechanisms. Genetics can state that the pattern raises concern for clonal evolution or transformation, but the pathology diagnosis of the progressive lesion is required for confident treatment selection.

The clinical geneticist should help the board define what kind of progression is being discussed. A molecular progression signal may justify repeat sampling, closer imaging or trial consideration. It usually does not justify switching therapy without clinical or radiologic context unless validated in that disease and setting. Conversely, obvious symptomatic or radiographic progression should not be ignored because ctDNA is negative, particularly in low-shedding tumors or sanctuary sites such as the CNS.

Progression type	Typical data source	Board implication	Caution
Biochemical progression	Tumor marker trend such as PSA, Tg, CA-125, CEA, calcitonin.	May trigger imaging, risk review or therapy reassessment.	Marker kinetics are disease-specific.
Radiographic progression	CT/MRI/PET/US or other imaging.	May define treatment failure, oligoprogression or local therapy target.	Pseudoprogression and flare patterns exist.
Molecular progression	ctDNA rise, new resistance alteration, MRD positivity.	May precede imaging; useful for planning and surveillance in validated contexts.	Negative plasma does not exclude tissue progression.
Clinical progression	Symptoms, organ dysfunction, performance decline.	May require urgent local/systemic/ supportive intervention.	Do not wait for perfect molecular data in organ threat.

Safe tumor-board wording examples
The detected alteration is biologically relevant, but its immediate treatment implications depend on current disease state and line of therapy; disease-specific guideline review is required before recommending therapy.
The patient appears to have oligoprogressive disease on otherwise controlled systemic therapy; repeat lesion-level review and consideration of local therapy may be more appropriate than immediate systemic switch.
This marker is prognostic rather than directly predictive in the current setting. It supports risk discussion and monitoring intensity, not a specific targeted therapy recommendation.
The molecular result is from a specimen obtained before the most recent therapy. If the active decision is resistance, repeat tissue biopsy or ctDNA should be considered if clinically feasible.

15.10 Guideline-based board wording

A genetics-informed board statement should be concise and traceable. It should name the disease context, biomarker, evidence source, clinical implication, limitation and next step. It should avoid vague statements such as “targetable mutation present” or “candidate for precision therapy” without specifying the setting and source. It should also avoid copying guideline algorithms into the report; instead, it should summarize the board-relevant conclusion.

Safe tumor-board wording examples
In the context of metastatic [tumor type] after [prior therapy], the detected [biomarker] is a guideline- and/or label-relevant predictive biomarker for consideration of [therapy class], provided performance status, organ function and local access are acceptable.
The biomarker is biologically plausible but not established as a standard treatment selection marker in this tumor type and line. Trial matching or re-discussion at progression is appropriate.
Current guideline logic requires [test] before selecting first-line systemic therapy. Tissue is limited; reflex RNA fusion testing should be prioritized if DNA panel does not identify a driver and clinical urgency permits.
The detected alteration is listed in knowledge bases as actionable in other tumor types, but disease-specific evidence is insufficient for routine use here. The recommendation is clinical trial search rather than off-label treatment.

Teaching vignette: Guideline placement changes actionability
A tumor report lists a BRAF V600E mutation. The board asks whether a BRAF/MEK inhibitor should be used.
Board teaching point: The geneticist should ask the tumor type, stage, prior therapies and guideline setting. BRAF V600E has very different implications in melanoma, colorectal cancer, lung cancer, thyroid cancer, glioma and other tumors. Actionability is tumor-type and line-dependent.

Teaching vignette: Therapy class versus patient feasibility
A patient with metastatic cancer has a targetable alteration and a drug with guideline support in later-line therapy. The patient also has rapidly worsening liver function and poor performance status.
Board teaching point: The geneticist should state that the biomarker is relevant but treatment feasibility is uncertain. The board should review expected time to benefit, hepatic dosing, toxicity, palliative goals and whether urgent supportive care or local intervention is the priority.

25. Use tumor-normal testing when somatic/germline discrimination or hereditary risk is central.
26. Use ctDNA as a complementary tool when tissue is unavailable, when resistance is suspected, or when serial monitoring is clinically meaningful; do not let negative ctDNA overrule strong tissue or imaging evidence.
27. Document what was tested, what was not tested, what failed, and what follow-up testing is needed.

17.13 Communication between board and laboratory

The board should not treat the laboratory report as an immutable black box. When a result is borderline, discordant or unexpectedly negative, direct communication with the molecular pathologist or laboratory director can change interpretation. The board may need to ask whether a region had adequate coverage, whether an amplification was focal, whether a variant was filtered as germline or artifact, whether a fusion caller was included, whether the assay can detect promoter variants, or whether an alternate sample is preferable.

A mature cancer precision board develops a feedback loop with the laboratory. The board shares clinical outcomes and discordant cases; the laboratory updates panel content, reporting templates and limitations; and both sides agree on reflex testing pathways. This feedback loop is essential when molecular testing is used not only for standard biomarkers but for complex decision support, trial matching and institutional research.

Model	Best use	Risk
Upfront DNA + RNA	Advanced cancers where missing a fusion would delay therapy.	Higher tissue use and cost.
DNA first, RNA reflex if negative	Common tumors where fusions are less frequent but important.	Sequential delay if reflex triggers are not automatic.
Pathology-triggered RNA	Fusion-defined tumor differential diagnosis.	Requires pathologist awareness and clear ordering pathway.
IHC/FISH screen then RNA	Low-resource or histology-enriched settings.	Screening false negatives/positives may misdirect testing.
ctDNA fusion testing	When tissue is unavailable or unsafe to biopsy.	Low shedding and assay design can cause false negatives.

18.10 RNA in resistance and lineage change

RNA can also be helpful after treatment resistance. It may reveal bypass fusions, altered transcript isoforms, splice-mediated resistance, target expression loss or lineage reprogramming. In prostate cancer, AR splice variants have been studied as resistance markers; in targeted therapy resistance, fusion partner changes or expression shifts may help explain loss of response. These applications require careful evidence grading because not all transcript changes have validated therapeutic implications.

The board should ask whether a resistance RNA result changes a standard therapy, supports a clinical trial, explains biology, or simply generates a research hypothesis. As with DNA, transcript-level findings must be linked to the current disease state and available interventions.

19.12 Integrating CNV/LOH with HRD and DNA repair decisions

LOH and copy-number architecture are central to HRD interpretation, but they are not identical to HRD. HRD assays may use genome-wide loss of heterozygosity, telomeric allelic imbalance, large-scale state transitions, mutational signatures, BRCA1/2 status, RAD51 functional assays or proprietary combinations. A pathogenic HRR gene variant without LOH may have different implications from biallelic inactivation. A high genomic scar score may reflect historical HRD even if current resistance has developed. A reversion mutation may restore homologous recombination despite a scar. The board should treat HRD as a multi-layer interpretation rather than a single CNV number.

When a DNA repair therapeutic decision depends on architecture, the board should document which HRD method was used, whether it is validated in that tumor type, whether biallelic inactivation is demonstrated, whether platinum sensitivity is present, and whether prior PARP inhibitor or platinum exposure suggests resistance. This topic is expanded in the DNA repair and HRD chapters, but CNV/LOH literacy begins here.

21.16 Teaching vignette: high TMB without MSI

A metastatic melanoma sample has TMB 35 mut/Mb, MSI stable, and a UV signature. The high TMB is consistent with UV-driven mutagenesis and supports immunotherapy biology in a tumor type where immunotherapy is already central. The clinical geneticist should not present this as a tumor-agnostic finding detached from melanoma guidelines. Instead, the board should integrate BRAF/NRAS/KIT status, disease burden, brain metastases, autoimmune history and prior therapy when considering immunotherapy or targeted therapy sequencing.

21.17 Chapter 21 key points

- dMMR, MSI-H and TMB-H are related but not identical biomarkers.
- IHC, PCR and NGS have different strengths, weaknesses and discordance patterns.
- MMR/MSI results can carry both treatment and hereditary-risk implications.
- TMB must be interpreted by assay, threshold, tumor type and treatment line.
- Immune biomarkers are probabilistic; contraindications and clinical context remain essential.
- Discordant results should trigger review rather than automatic action.

Ancestry can influence founder-variant probabilities and variant interpretation. Ashkenazi Jewish ancestry, for example, can influence BRCA1/2 founder testing strategy, but founder testing alone can miss non-founder variants and other genes. The board should avoid ancestry stereotyping and should still use phenotype-appropriate testing.

Testing deceased patients can be highly valuable for family risk but may be governed by local laws and institutional policies. Stored tissue may have poor DNA quality, and tumor tissue cannot substitute for constitutional DNA without a validated strategy. When posthumous testing is considered, ethics, consent, next-of-kin and laboratory policy should be clarified.

25.12 Pre-test and post-test counseling: minimum content

Counseling phase	Minimum content
Before testing	Purpose of testing; genes/panel scope; possible P/LP, negative and VUS results; family implications; privacy; insurance/legal issues according to local law; secondary findings if relevant; limitations.
At result disclosure: P/LP	Gene-specific cancer risks; current cancer implications; surveillance/risk-reducing options; relatives at risk; cascade testing; reproductive options; written summary.
At result disclosure: VUS	Not actionable; no predictive testing of relatives; management based on history; reclassification process; avoid irreversible decisions.
At result disclosure: negative	True negative versus uninformative negative; residual risk; whether affected relative testing or updated testing is needed; screening plan.
Long-term follow-up	Reanalysis/recontact policy; changes in family history; transition of care; how patient can request updates.

Lynch syndrome can explain dMMR and support immunotherapy discussion in certain cancers. RET germline status can drive MEN2 family management while somatic RET alterations can be targeted in selected tumors. The board should keep two columns in its reasoning: “What does this change for current cancer treatment?” and “What does this change for inherited-risk care?”

Finding	Current cancer question	Inherited-risk question
Germline BRCA2 P/LP	Does disease-site guidance support platinum/ PARP/trial strategy?	Which relatives need targeted testing and what surveillance applies?
Germline MLH1 P/LP	Is tumor dMMR/MSI-high and immunotherapy-relevant?	What colon/endometrial and other surveillance/ cascade testing are needed?
Germline RET P/LP	Medullary thyroid cancer surgical/systemic strategy and pheochromocytoma safety.	MEN2 risk category, family testing and prophylactic/surveillance planning.
Tumor-only TP53	May be somatic progression marker.	Only a germline issue if phenotype/technical features support confirmation.
Moderate-risk gene P/LP	Usually not a universal therapy biomarker.	Risk management is gene- and guideline-specific.

Common pitfalls and safety controls

Pitfall	Why it is unsafe	Control
Overcalling biology	A plausible pathway does not equal a validated patient-level treatment indication.	Separate biological interpretation from clinical recommendation.
Ignoring specimen context	Old primary tissue, low tumor purity, decalcification or failed RNA can produce misleading negative or incomplete results.	Document specimen quality and consider repeat tissue/plasma testing when it changes management.
Guideline drift	A biomarker may be actionable in one tumor type or line but not in another.	State disease, stage, line, guideline version and local access before action wording.
No owner	A correct board discussion may fail if no clinician is responsible for the next step.	Assign owner, due date and follow-up metric in the report.

Board workflow checklist

63. Start with the active clinical question: diagnosis, initial therapy, recurrence, resistance, germline risk, toxicity prevention, trial matching or theranostic feasibility.
64. Verify diagnosis, specimen type, assay method, report date, tumor cellularity and whether the result is tumor-only, paired tumor-normal, RNA-based, plasma-based or germline.
65. Classify each finding by clinical role: diagnostic, prognostic, predictive, resistance, hereditary, toxicity-related, monitoring or research/trial-level.
66. Translate the finding only within tumor type, treatment line, patient fitness, local availability and evidence tier.
67. Document the limitation, recommendation owner and measurable follow-up endpoint.

Mini teaching vignette

A metastatic lung adenocarcinoma report lists EGFR exon 19 deletion, TP53 mutation and TMB-low. The board report summarizes only decision-relevant findings on page one, states that EGFR is the immediate predictive marker, records PD-L1 but notes it is not the primary driver of first decision in the presence of EGFR, and assigns oncology follow-up.

Disease-site sign-out checklist

Checklist item	Required statement before sign-out
Diagnosis checked	Histology, site, subtype and stage verified before molecular interpretation.
Specimen checked	Tumor cellularity, assay scope, DNA/RNA/protein adequacy and specimen date reviewed.
Actionability checked	Evidence level, disease context, current treatment line and drug access documented.
Germline checked	Hereditary signals and family-history triggers routed appropriately.
Imaging checked	Dominant lesions, discordant lesions, organ-threat sites and nuclear medicine phenotype reviewed.
Follow-up checked	Next measurable outcome stated: imaging, biomarker, ctDNA, toxicity, germline confirmation, trial enrollment or repeat biopsy.

Supplementary Tool. Universal disease-site board workflow

Step	Clinical geneticist task	Board output
1. Verify diagnosis	Confirm exact histology, site, stage and specimen adequacy.	Pathology-anchored working diagnosis.
2. Define active decision	State whether decision is initial therapy, recurrence, resistance, germline risk, trial matching or theranostics.	One-sentence active board question.
3. Complete testing	Check required disease-site DNA/RNA/protein/germline/imaging data.	Molecular readiness statement.
4. Interpret results	Classify each result by clinical role and evidence level.	Evidence-tiered interpretation.
5. Integrate context	Map imaging, organ threat, patient goals, access and toxicity.	Patient-level management relevance.
6. Document	Write recommendation, uncertainty, owner and follow-up metric.	Signed board recommendation.

Mini teaching vignette

A metastatic ER-positive/HER2-negative case has ESR1 mutation in plasma after aromatase inhibitor exposure and PIK3CA mutation in tissue. The board separates endocrine resistance sequencing from PI3K-pathway eligibility and assigns oncology/pharmacy toxicity review.

Disease-site sign-out checklist

Checklist item	Required statement before sign-out
Diagnosis checked	Histology, site, subtype and stage verified before molecular interpretation.
Specimen checked	Tumor cellularity, assay scope, DNA/RNA/protein adequacy and specimen date reviewed.
Actionability checked	Evidence level, disease context, current treatment line and drug access documented.
Germline checked	Hereditary signals and family-history triggers routed appropriately.
Imaging checked	Dominant lesions, discordant lesions, organ-threat sites and nuclear medicine phenotype reviewed.
Follow-up checked	Next measurable outcome stated: imaging, biomarker, ctDNA, toxicity, germline confirmation, trial enrollment or repeat biopsy.

Diagnosis checked	Histology, site, subtype and stage verified before molecular interpretation.
Specimen checked	Tumor cellularity, assay scope, DNA/RNA/protein adequacy and specimen date reviewed.
Actionability checked	Evidence level, disease context, current treatment line and drug access documented.
Germline checked	Hereditary signals and family-history triggers routed appropriately.
Imaging checked	Dominant lesions, discordant lesions, organ-threat sites and nuclear medicine phenotype reviewed.
Follow-up checked	Next measurable outcome stated: imaging, biomarker, ctDNA, toxicity, germline confirmation, trial enrollment or repeat biopsy.

Disease-site sign-out checklist

Checklist item	Required statement before sign-out
Diagnosis checked	Histology, site, subtype and stage verified before molecular interpretation.
Specimen checked	Tumor cellularity, assay scope, DNA/RNA/protein adequacy and specimen date reviewed.
Actionability checked	Evidence level, disease context, current treatment line and drug access documented.
Germline checked	Hereditary signals and family-history triggers routed appropriately.
Imaging checked	Dominant lesions, discordant lesions, organ-threat sites and nuclear medicine phenotype reviewed.
Follow-up checked	Next measurable outcome stated: imaging, biomarker, ctDNA, toxicity, germline confirmation, trial enrollment or repeat biopsy.

Supplementary Tool. Universal disease-site board workflow

Step	Clinical geneticist task	Board output
1. Verify diagnosis	Confirm exact histology, site, stage and specimen adequacy.	Pathology-anchored working diagnosis.
2. Define active decision	State whether decision is initial therapy, recurrence, resistance, germline risk, trial matching or theranostics.	One-sentence active board question.
3. Complete testing	Check required disease-site DNA/RNA/protein/germline/imaging data.	Molecular readiness statement.
4. Interpret results	Classify each result by clinical role and evidence level.	Evidence-tiered interpretation.
5. Integrate context	Map imaging, organ threat, patient goals, access and toxicity.	Patient-level management relevance.
6. Document	Write recommendation, uncertainty, owner and follow-up metric.	Signed board recommendation.

Practical board table

Pattern	Typical interpretation	Possible board action	Main caution
Molecular and imaging concordant	Sampled lesion matches dominant imaging phenotype	Proceed with unified systemic or targeted strategy	Still monitor for emerging clones
Molecular target present but lesion FDG-high and rapidly progressive	Possible resistant subclone or transformed phenotype	Biopsy growing lesion; consider systemic change or local control	Avoid assuming old biopsy represents current disease
Tracer-positive heterogeneous disease	Theranostic option may help selected lesions	Consider dosimetry and mixed treatment plan	Uptake does not equal adequate dose
ctDNA rising with stable imaging	Molecular progression may precede radiographic change	Short-interval imaging or confirmatory testing	CHIP and assay noise must be excluded

Safe board wording

The board should interpret this molecular result together with the lesion map. The most clinically threatening lesion is discordant and should be considered for repeat sampling or local management.

Theranostic imaging suggests target expression, but treatment feasibility requires organ-dose and lesion-dose review.

Common pitfalls

- Using one old biopsy to represent all lesions.
- Calling tracer uptake therapeutic without dosimetry or clinical context.
- Ignoring lesion-specific symptoms.
- Changing systemic therapy for one indolent discordant lesion without considering local treatment.

Teaching vignette

A patient with prostate cancer has PSMA-avid bone disease but one enlarging FDG-avid/PSMA-low liver lesion. The concordance index highlights the liver lesion as a likely resistant clone; biopsy or local therapy may be more rational than assuming homogeneous PSMA-targetable disease.

Chapter references

Eisenhauer EA, Therasse P, Bogaerts J, et al. New response evaluation criteria in solid tumours: revised RECIST guideline version 1.1. Eur J Cancer. 2009;45:228-247.

EANM/SNMMI procedure standards and practice guidelines for nuclear medicine imaging and radiopharmaceutical therapy, including patient selection, imaging quality and dosimetry principles.

Westphalen CB, et al. ESMO Precision Oncology Working Group recommendations on the structure and quality indicators for molecular tumour boards in clinical practice. Ann Oncol. 2025.

Safe board wording

The HRD evidence supports consideration of DNA-damage response-directed therapy in the correct disease and treatment-line context, but the board should verify biallelic status, prior platinum response and current label/guideline eligibility.

This DDR alteration is not sufficient by itself to infer PARP inhibitor sensitivity.

Common pitfalls

- Treating all DDR genes as equivalent.
- Ignoring zygosity.
- Ignoring reversion mutations.
- Using HRD score outside validated disease context.
- Missing germline implications.

Teaching vignette

A patient with ovarian cancer has a high HRD score but progressed early on platinum. The board should avoid assuming PARP sensitivity from scar score alone and should review disease status, prior treatment and alternative options.

Chapter references

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

ASCO guideline panel. Germline testing in patients with cancer: ASCO guideline and related panel recommendations. J Clin Oncol. 2024.

Safe board wording

ctDNA supports molecular progression, but the board should correlate with imaging and clinical course before changing therapy.

The plasma-negative result does not exclude active disease because assay sensitivity and tumor shedding are limited.

Common pitfalls

- Changing therapy on one low-level unconfirmed variant.
- Ignoring CHIP.
- Comparing results from different assays as if equivalent.
- Using ctDNA MRD outside validated context.
- Forgetting sample timing after surgery or radiation.

Teaching vignette

A patient on EGFR inhibitor develops rising ctDNA with an on-target resistance mutation before RECIST progression. The board may recommend confirmatory imaging, trial matching or next-line planning, rather than immediate unsupported therapy change.

Chapter references

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

Eisenhauer EA, Therasse P, Bogaerts J, et al. New response evaluation criteria in solid tumours: revised RECIST guideline version 1.1. Eur J Cancer. 2009;45:228-247.

Safe board wording

This tumor-only finding raises a germline alert and should be followed by consented germline testing and genetic counseling before any familial-risk conclusion is made.

No predictive testing of relatives should be based on a VUS or unconfirmed tumor-only variant.

Common pitfalls

- Calling a tumor-only result germline.
- Missing relatives at risk.
- Using VUS for cascade testing.
- Failing to document consent.
- Confusing somatic treatment eligibility with inherited-risk management.

Teaching vignette

A young patient with medullary thyroid carcinoma has a RET variant in the tumor report. The board should recommend germline RET testing and MEN2-oriented counseling, while avoiding premature familial conclusions until germline confirmation.

Chapter references

ASCO guideline panel. Germline testing in patients with cancer: ASCO guideline and related panel recommendations. J Clin Oncol. 2024.

Richards S, Aziz N, Bale S, et al. Standards and guidelines for the interpretation of sequence variants: ACMG/AMP joint consensus recommendation. Genet Med. 2015;17:405-424.

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

Safe board wording

The imaging phenotype supports theranostic consideration, but final treatment planning requires nuclear medicine review of lesion-level uptake, dosimetry and organ reserve.

Dominant target-negative disease makes the radioligand strategy unlikely to control the current clinical threat.

Common pitfalls

- Treating any positive uptake as enough.
- Ignoring FDG-positive target-negative lesions.
- Forgetting prior marrow toxicity or renal impairment.
- Overlooking symptom-driving lesions.
- Offering research tracers as standard care.

Teaching vignette

A neuroendocrine tumor patient has SSTR-positive liver and bone disease but rapidly growing FDG-positive/SSTR-low peritoneal disease. The feasibility index suggests that PRRT may not control the dominant threat without additional systemic or local strategy.

Chapter references

EANM/SNMMI procedure standards and practice guidelines for nuclear medicine imaging and radiopharmaceutical therapy, including patient selection, imaging quality and dosimetry principles.

Eisenhauer EA, Therasse P, Bogaerts J, et al. New response evaluation criteria in solid tumours: revised RECIST guideline version 1.1. Eur J Cancer. 2009;45:228-247.

Westphalen CB, et al. ESMO Precision Oncology Working Group recommendations on the structure and quality indicators for molecular tumour boards in clinical practice. Ann Oncol. 2025.

Safe board wording

The board interpretation is based on the available validated reports and current disease context. Recommendation: [action]. Evidence/limitation: [evidence tier and uncertainty]. Owner: [team]. Follow-up: [metric and date].

No treatment change is recommended from this finding alone; it should be retained as context and reassessed if disease state or guideline status changes.

Common pitfalls

- Producing a long unreadable report.
- Copying laboratory text without clinical translation.
- Leaving out technical limitations.
- Not assigning responsibility.
- Not documenting dissent or uncertainty.

Teaching vignette

A one-page report for a patient with metastatic lung cancer should state that EGFR exon 19 deletion is predictive in NSCLC, identify prior therapy and resistance status, and name the oncology owner for treatment sequencing rather than simply listing the mutation.

Chapter references

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

Westphalen CB, et al. ESMO Precision Oncology Working Group recommendations on the structure and quality indicators for molecular tumour boards in clinical practice. Ann Oncol. 2025.

U.S. Food and Drug Administration. List of Cleared or Approved Companion Diagnostic Devices (In Vitro and Imaging Tools). Continuously updated FDA resource.

- Omitting version control.
- Failing to define whether a conclusion is diagnostic, predictive or research-only.

Teaching vignette

A sarcoma case may require histology, IHC, RNA fusion testing and radiology anatomy. The architecture keeps each source visible and then explains how the fusion confirms diagnosis and changes treatment or trial options.

Chapter references

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

Collins GS, et al. TRIPOD+AI statement: updated guidance for reporting clinical prediction models that use regression or machine learning methods. BMJ. 2024;385:e078378.

Common pitfalls

- Dashboard fields without assigned owners.
- Combining urgency and evidence level into one score.
- Failing to update after the meeting.
- Using dashboard output as automated treatment order.

Teaching vignette

A patient with a rare fusion-positive tumor is highly actionable but not board-ready because RNA quality, diagnosis and prior therapy line are unclear. The dashboard should delay the final recommendation rather than encourage a premature targeted-therapy statement.

Chapter references

Westphalen CB, et al. ESMO Precision Oncology Working Group recommendations on the structure and quality indicators for molecular tumour boards in clinical practice. Ann Oncol. 2025.

von Elm E, Altman DG, Egger M, et al. The Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) statement. Lancet. 2007;370:1453-1457; STROBE checklist resource.

Collins GS, et al. TRIPOD+AI statement: updated guidance for reporting clinical prediction models that use regression or machine learning methods. BMJ. 2024;385:e078378.

Safe board wording

The board may use this result for clinical decision support under the documented consent pathway, but germline implications require separate consented genetics evaluation.

This dataset should not be used for research analysis until the approved governance and consent conditions are confirmed.

Common pitfalls

- Using research results as clinical results without validation.
- Ignoring family implications.
- No policy for secondary findings.
- Uncontrolled sharing of identifiable reports.
- No recontact process.

Teaching vignette

A tumor-normal panel identifies a likely pathogenic mismatch repair gene variant. The board must separate immediate tumor treatment implications from consented germline disclosure and family counseling.

Chapter references

World Medical Association. Declaration of Helsinki: Ethical Principles for Medical Research Involving Human Participants. 2024 revision and current WMA resource.

ASCO guideline panel. Germline testing in patients with cancer: ASCO guideline and related panel recommendations. J Clin Oncol. 2024.

Richards S, Aziz N, Bale S, et al. Standards and guidelines for the interpretation of sequence variants: ACMG/AMP joint consensus recommendation. Genet Med. 2015;17:405-424.

- Using non-validated research results clinically.
- Not documenting assay version.
- No plan for failed RNA.

Teaching vignette

A sarcoma sample is DNA panel-negative. Because the suspected diagnosis is fusion-driven and RNA was not performed, the board should recommend RNA fusion testing rather than concluding there is no driver.

Chapter references

International Organization for Standardization. ISO 15189:2022 Medical laboratories - requirements for quality and competence.

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

- Using PRS without ancestry calibration.
- Failing to document access barriers.
- Assuming all patients can complete germline counseling.

Teaching vignette

A patient has an NTRK fusion but cannot access the approved agent locally. The board should document the evidence, explore assistance/trial pathways and avoid implying that lack of access equals lack of actionability.

Chapter references

ESMO Precision Medicine Working Group. Recommendations for the use of next-generation sequencing for patients with advanced cancer in 2024 and related genomic reporting recommendations. Ann Oncol / ESMO resources. 2024.

Mateo J, Chakravarty D, Dienstmann R, et al. A framework to rank genomic alterations as targets for cancer precision medicine: the ESMO Scale for Clinical Actionability of Molecular Targets (ESCAT). Ann Oncol. 2018;29:1895-1902.

Husereau D, Drummond M, Augustovski F, et al. Consolidated Health Economic Evaluation Reporting Standards 2022 (CHEERS 2022) statement. BMJ. 2022;376:e067975.

- No mention of guideline version.
- Confusing research with clinical care.
- Overstating germline from tumor-only data.
- Using AI outputs without source verification.

Teaching vignette

A report says “NTRK VUS - consider TRK inhibitor.” Safer wording is that the VUS is not actionable; if clinical suspicion remains, confirm fusion status with validated RNA testing or refer for expert review.

Chapter references

Li MM, Datto M, Duncavage EJ, et al. Standards and guidelines for the interpretation and reporting of sequence variants in cancer: AMP/ASCO/CAP joint consensus recommendation. J Mol Diagn. 2017;19:4-23.

U.S. Food and Drug Administration. List of Cleared or Approved Companion Diagnostic Devices (In Vitro and Imaging Tools). Continuously updated FDA resource.

The study should report how missing molecular or imaging data affected interpretability.

Common pitfalls

- Hindsight bias.
- No denominator.
- No missingness analysis.
- Overclaiming outcome benefit.
- Using updated therapies unavailable at the time without labeling this clearly.

Teaching vignette

A retrospective review finds that RNA testing would have detected actionable fusions in selected DNA-negative cases. The correct conclusion is that RNA reflex testing may improve board completeness and should be prospectively evaluated.

Chapter references

von Elm E, Altman DG, Egger M, et al. The Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) statement. Lancet. 2007;370:1453-1457; STROBE checklist resource.

Collins GS, et al. TRIPOD+AI statement: updated guidance for reporting clinical prediction models that use regression or machine learning methods. BMJ. 2024;385:e078378.

Common pitfalls

- Collecting too much unstructured data.
- No follow-up ownership.
- No implementation outcome.
- No version control.
- Confusing registry with treatment directive.

Teaching vignette

A registry shows that 40% of high-evidence recommendations were not implemented because of drug access. This finding is an institutional quality signal, not a molecular interpretation issue.

Chapter references

von Elm E, Altman DG, Egger M, et al. The Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) statement. Lancet. 2007;370:1453-1457; STROBE checklist resource.
