oluşturma gibi alanlarda kullanılan yapay zekâ destekli uygulamalar, çocukların anlatı sürecine daha aktif katılım göstermelerini sağlamakta ve yaratıcılıklarını teşvik etmektedir. ChatGPT, Google Gemini, Midjourney ve ElevenLabs gibi araçlar; çocukların yaşına ve ilgi alanlarına uygun özgün öykülerin oluşturulmasını, bu öykülerin sesli hâle getirilmesini ve etkileşimli biçimlerde sunulmasını mümkün kılmaktadır. Yapay zekâ, tek yönlü anlatı yapılarının ötesine geçerek çocuğun kararları doğrultusunda şekillenebilen dinamik kurguların ortaya konmasına olanak tanımaktadır. Bu sayede anlatı süreci hem zenginleşmekte hem de çocuğun anlatıyla olan bilişsel ve duygusal etkileşimi derinleşmektedir. Böylece yazınsal deneyim, kişiselleştirilmiş ve çok katmanlı bir öğrenme sürecine dönüşmektedir.

Nasrettin Hoca ve Tavşan-Kaplumbağa Hikayeleri: Çocukların olay akışını hissetmelerini sağlamak, dikkatlerini çekmek ve okuma isteklerini artırmak için *Unity3D* ve *Vuforia SDK* kullanılarak yapılan AR projeleridir. Bu projeler 3D görseller ve ses kullanmaktadır. Yakınlaştırma, duraklatma ve bölümleri yeniden başlatma gibi işlevler için etkileşimli butonlarla her yaş grubu için kullanımı kolay hale getirilmiştir.

Sonuç olarak, AR teknolojisi, öğrenmeyi çocuklar için daha ilgi çekici, somut ve eğlenceli hale getirmek, çeşitli öğrenme stillerini desteklemek ve etkin katılımı teşvik etmek amacıyla çeşitli eğitim materyallerine giderek daha fazla dahil edilmektedir.

çocuk edebiyatı ürünlerinin özel gereksinimli ve dezavantajlı çocukların gelişiminde olumlu sonuçlar doğurduğu bir gerçektir.

Dijital olanakların sağladığı en büyük yararlardan biri erişimin toplumun geneline ya da çok sayıda bireye yayılmasıdır. Özellikle sosyo ekonomik düzeyi düşük coğrafyalarda çeşitli girişimlerin (Örneğin, African Storybook) milyonlarca çocuğu kitapla buluşturması dijitalleşmenin üstün ayrıcalıklarındandır. Bunun dışında yerel dillere, azınlık dillerine yer verilmesi, özel gereksinimli bireylerin gereksinimlerinin hesaba katılması bu tür uygulamaların değerini daha da artırmaktadır.

Dijital çocuk edebiyatı yapıtları çocuğun kitabı tek başına tekrar tekrar, özerk ve yetişkin yardımı olmadan okumasına, özellikle engelli çocuğun kitapla kuracağı bağın bireyselleşmesine hizmet etmektedir. Bu yönden dijital çocuk edebiyatı yapıtlarının dezavantajlı gruplar ve engelli bireyler için önemini ortaya koyacak bilgilerin kamuoyuyla paylaşılması gerekmektedir.

Dijital çocuk edebiyatı yapıtları, çocuk okurun metinle etkileşim kurmasına olanak sağlayarak, özellikle engelli ve dezavantajlı gruplardaki çocuklar için kişiselleştirilmiş okuma deneyimlerini desteklemektedir. Bu bağlamda yapay zekâ, metinleri anında farklı dillere çevirme, görme ve işitme engellerine uygun formatlara dönüştürme, okuma güçlüğü yaşayan bireylere uyarlanmış içerikler geliştirme gibi işlevleriyle kapsayıcı eğitimi güçlendirmede ve öğrenme engellerini en aza indirmede önemli bir araç olarak öne çıkmaktadır. Böylece yapay zekâ ile desteklenen dijital öyküler, salt teknolojik anlatılardan çıkarak, her çocuğun ihtiyaçları, yetenekleri ve kimliği doğrultusunda erişebileceği kapsayıcı öğrenme ortamlarına dönüşebilmektedir.

seçme özgürlüğünün Türkçe öğretmenlerine bırakılması önerilmektedir.

ChatGPT-4o, 5. sınıflar için tasarladığı etkinliklerde çoğunlukla eleştirel düşünme ile anlatma becerilerini ilişkilendirmiştir. Bu durumun üstesinden gelmek için prompt (istem) yazılırken temel dil becerilerinin her biri ayrı vurgulanmalıdır.

ChatGPT-4o hazırladığı bir diğer etkinlikte ise 5. sınıflardan makale yazmalarını istemektedir. Ancak 2024 Ortaokul Türkçe Dersi Öğretim Programı'na göre öğrenciler makale türü ile 8. sınıfta tanışmaktadırlar. ChatGPT-4o'nun bu metin türünde 5. sınıf öğrencilerinden yazı üretmelerini istemesi 2024 Ortaokul Türkçe Dersi Öğretim Programı'nı hafızasına almadığını göstermektedir. Ancak Türkçe Dersi Öğretim programı yapay zekâ aracına yüklense dâhi bu tip hatalar yapma ihtimali vardır. Bu yüzden yapay zekânın öğrenciler için hazırladığı etkinlikler Türkçe öğretmeni tarafından kontrol edilmeden öğrencilere uygulanmaması gerekir. Aynı zamanda bu durum yapay zekânın bilişsel yetkinliğinin bir öğretmenin yerini alamayacak nitelikte olduğunun göstergesidir.

ChatGPT-4o'nun 8. sınıf öğrencileri için geliştirdiği etkinlikler daha üst seviyededir. Bu bakımdan yapay zekânın öğrencilerin seviyelerine yönelik ayrım yapabildiği söylenebilir. Örneğin 8. sınıflar için önerilen karakter analizi etkinliğinde 5. sınıflar için hazırlanana göre daha fazla derinlemesine sorular bulunmaktadır. Her iki düzey için hazırlanan etkinliklerde eğitim öğretim sürecinin ayrılmaz bir parçası olan değerlendirme boyutu göz ardı edilmemiştir.

ancak sağlanabilir, çocukların dijital dünyanın oluşturduğu risklerden korunması için başka bir seçenek yoktur. Çocuğun dijital haklarının odakta olduğu dizgeler, düzenekler ve politikalar geliştirmek, bunların yaygınlaştırmak ve dijital güvenliği toplumun ortak erdemlerinden birine dönüştürmek günümüz çocuklarını çevrim içi çekincelere karşı koruma altına almanın yanı sıra gelecek kuşakların etik duyarlılığı yüksek, demokratik, eşitlikçi ve kapsayıcı bir toplum olmasının da önünü açar.

retrotranspositional activity: LINE-1, Alu, and SVA. Estimated insertion rates are approximately 1 new L1 insertion per 100–200 births, 1 new Alu insertion per 20 births, and 1 new SVA insertion per 900 births. Collectively, this means that approximately 1 in 15–20 live births carries a de novo retrotransposon insertion. While the majority of new insertions land in non-functional genomic regions and are phenotypically silent, a fraction (~0.1%) insert into or near genes and can cause disease. Over 120 disease-causing retrotransposon insertions have been documented to date.

9.6 Segmental Duplication Evolution

9.6.1 The Hominid-Specific Burst of Segmental Duplications

Comparative genomic analysis reveals that the human genome experienced a burst of segmental duplication accumulation specific to the hominid lineage. Approximately 5% of the human genome consists of segmental duplications >1 kb with >90% identity, compared to approximately 2–3% in other mammals. This hominid-specific expansion occurred primarily within the last 10–15 million years and was concentrated in pericentromeric regions and on specific chromosomes (particularly chromosomes 1, 7, 15, 16, 17, and 22). These same chromosomes are the ones most frequently affected by recurrent microdeletion/microduplication syndromes in clinical genetics — a direct consequence of their SD-rich architecture predisposing to NAHR (Eichler, Trends Genet, 2001).

20.4 Laboratory Accreditation and Quality Standards for Somatic CMA

Somatic microarray analysis must be performed in a laboratory meeting appropriate accreditation standards for clinical genomic testing. Key quality requirements include:

- CAP/CLIA accreditation (USA) or ISO 15189 accreditation (international): Mandatory for clinical somatic genomic testing.
- Tumor content documentation: The report must state the estimated tumor cellularity and the minimum detectable allele frequency at that cellularity.
- Somatic vs. constitutional variant annotation: The report must clearly distinguish somatic findings from constitutional (germline) variants, which may be detected in the background normal cells.
- Pathologist co-signature: In many jurisdictions and accreditation frameworks, clinical somatic genomic reports require co-signature by a board-certified pathologist.
- Reporting format: Somatic CMA reports typically follow ISCN 2020 nomenclature for chromosomal findings and include clinical interpretation, prognosis implications, and therapeutic relevance where applicable.

Görüldüğü gibi matematiksel olarak elde edilen oran ile bazı canlıların kemiklerinin incelenmesi ve yapılan gözlemler ile elde edilen sonuçlar oldukça uyumludur. Dolayısıyla bunlar kör bir tesadüfün ürünü olabilir mi?

Kuran-ı Kerim'de de kemikler ile ilgili ayetler mevcuttur. Örneğin Bakara Suresi'nde

"... Şimdi sen kemiklere bak, onları nasıl düzenliyor, sonra ona nasıl et giydiriyoruz... (Bakara Suresi, 259)" buyrulmaktadır.

Sonuç

Bu çalışmada kemik-ilik oranının matematiksel olarak incelenmesiyle, dayanıklılığı artırırken malzeme kullanımını azaltan en uygun iç boşluk oranının yaklaşık $\kappa \simeq 0{,}62$ olduğu gösterilmiştir. Çeşitli canlıların kemiklerinden elde edilen ölçümler bu teorik sonuçla uyumlu olup, doğadaki yapıların optimalite ilkelerine göre şekillendiğini desteklemektedir. Böylece canlıların kemik yapılarının rastlantısal olmadığı; aksine, en az maddeyle en fazla dayanıklılığı sağlayan fiziksel ve matematiksel prensiplerle uyumlu biçimde düzenlendiği anlaşılmaktadır. Bu durum, doğadaki mimarinin ardında yatan ölçü, denge ve düzen fikrini güçlendirmekte hem biyolojik hem de matematiksel açıdan dikkat çekici bir uyum sergilemektedir.

SONUÇ

Kâinata matematik gözüyle bakıldığında, görülen simetrik ve estetik düzen, o kadar ince ve anlamlı yaratılmıştır ki, bu mucize ve harika yaratılışın kör tesadüfe, akılsız, şuursuz sebeplere ve tabiata verilmesi imkânsızdır.

Bu, gözle görülen hassas ve harika düzen, akıl sahiplerine Allah'ın birliğini ve her şeyi sonsuz ilim, irade, kudret ve hikmetle yarattığını ispat etmektedir.

sistemi geliştirdi, sonra milyonlarca yıl içerisinde boşaltım sistemi geliştirdi. Azıcık biyoloji bilen herkes bu iddiaya sadece güler. Çünkü sindirim yapıp boşaltamamak ölmek demektir. Aynı şekilde biyokimyasal reaksiyonlar yapıp, tampon sisteme sahip olmamak demek, biyokimyanın çökmesi demektir.

Bu biyokimyasal gerçeklikler, canlılardaki asit–baz homeostazının rastlantısal mutasyonlar ve doğal seçilim yoluyla aşamalı olarak ortaya çıktığı yönündeki evrimsel açıklamaları bilimsel açıdan yetersiz kılmaktadır. Çünkü burada gözlenen yapı, bağımsız parçaların zamanla bir araya gelmesinden ziyade, eşzamanlı komplekslik ve ince ayar sergileyen, amaçlı ve ölçülü bir bütünlüğe işaret etmektedir. Nitekim Kur'an'da "Şüphesiz Biz her şeyi bir ölçü ile yarattık" (Kamer, 49) buyurulmakta; canlı sistemlerde gözlenen bu hassas denge, söz konusu ilkenin biyokimyasal düzeydeki somut bir yansıması olarak karşımıza çıkmaktadır. Dolayısıyla tampon sistemler ve homeostatik denge, canlılığın kör ve yönsüz süreçlerin değil; düzen, ölçü ve hikmet sahibi bir Yaratıcı'nın eseri olduğunu gösteren güçlü bilimsel deliller arasında yer almaktadır.

of Zheng et al. (2022), and the wind-wave generation theory of Pierini (2025) together demonstrate that the wave environment confronting ships and offshore structures is shaped by processes spanning time scales from fractions of a second (capillary waves) to hours (tidal oscillations and seiches) and spatial scales from centimetres to ocean basins. The extreme value methods of Guedes Soares and Santos (2015) close the chain from physics to engineering practice by providing the statistical tools needed to estimate design wave heights for return periods of 50–100 years. These wave mechanics foundations underpin the ship motions and seakeeping analysis presented in the *Ship Motions and Seakeeping* chapter of the companion volume and the structural loading calculations of Chapter 5.

face, with less than 2% reflected at high sun angles rising to total reflection at grazing incidence (Dera, 1992). Below the surface, underwater irradiance follows exponential decay (Equation 2.13), governed by the diffuse attenuation coefficient K_d whose magnitude varies across the Jerlov classification from $\sim 0.017\ \mathrm{m}^{-1}$ (Type I, euphotic depth $\sim 140\ \mathrm{m}$) to $\sim 0.35\ \mathrm{m}^{-1}$ (Coastal 5, $\sim 10\ \mathrm{m}$) (Dera, 1992). The Gershun equation (Equation 2.14) provides the fundamental connection between the divergence of the irradiance vector and the absorption coefficient, enabling in situ determination of inherent optical properties from irradiance measurements.

The electromagnetic foundations—Coulomb's law (Equation 2.1), the magnetic force on moving charges (Equation 2.2), the Biot–Savart law (Equation 2.3), and Faraday's law of induction (Equation 2.4)—govern radar, GNSS, radio communications, shipboard power generation, and compass correction systems (Campbell, 2025; Griffiths, 2013). The magnetic compass exploits the torque $\vec{\tau} = \vec{m} \times \vec{B}$ (Equation 2.10) to align with the Earth's horizontal field, while deviation arising from the ship's ferromagnetic structure must be compensated by careful adjustment. The contrast between the ocean's extreme transparency to acoustic waves and the rapid attenuation of electromagnetic radiation—the SOFAR channel spans thousands of kilometres while the photic zone extends at most $140\ \mathrm{m}$—defines the fundamental operating envelopes for underwater sensing and communication, a theme developed further in Chapter 6.

3.6 Conclusion

The Coriolis acceleration $\mathbf{a}_C = 2\boldsymbol{\omega} \times \mathbf{v}$ (Equation 3.4) is the unifying mechanism of atmospheric and oceanic dynamics, deflecting winds, organising global circulation cells, and governing the geostrophic wind $V_g = (1/\rho f)(\Delta p/\Delta n)$ (Equation 3.6) that blows parallel to the isobars (Cornish & Ives, 2009; Dera, 1992). The vertical thermal structure of the atmosphere, characterised by the dry adiabatic lapse rate $\Gamma_d = g/c_p \approx 9.8\,^\circ\mathrm{C\,km^{-1}}$ (Equation 3.1) and the lower saturated rate ($4\,^\circ\mathrm{C\,km^{-1}}$ to $7\,^\circ\mathrm{C\,km^{-1}}$), determines atmospheric stability and thereby controls whether convective clouds, frontal precipitation, or clear skies prevail (Cornish & Ives, 2009). The three-cell model—Hadley, Ferrel, and Polar—explains the trade winds, westerlies, and polar easterlies, while the ITCZ migrates seasonally with the sun, producing the calm doldrums and squally thunderstorms of the tropics.

For mariners, the most operationally critical systems are the extratropical cyclone life cycle (warm front, cold front, occlusion), the tropical cyclone with its dangerous semicircle where translational and rotational winds add, and the fog types—advection, radiation, and frontal—that reduce visibility below 1000 m (Cornish & Ives, 2009). Tropical cyclones require sea surface temperatures exceeding $26.5\,^\circ$C and sufficient Coriolis deflection (latitude above $\sim 5^\circ$); Buys Ballot's law provides the operational rule for locating storm centres and identifying the dangerous semicircle. The Beaufort scale condenses the physics of wind–wave interaction into an observational framework from Force 0 (calm) to Force 12 (hurricane), enabling visual estimation of conditions at sea. At the air–sea interface, the continuous exchange of shortwave radiation, longwave emission, and latent and sensible heat fluxes couples the ocean thermal structure to atmospheric circulation, with sea surface temperature as the controlling variable (Dera, 1992).

method (Dera, 1992). The Brunt–Väisälä frequency $N^2 = -(g/\rho)\,\mathrm{d}\rho/\mathrm{d}z$ (Equation 4.6) measures the vertical stability of the water column, while the three-layer vertical structure—mixed layer, thermocline, and deep ocean—is maintained by the competition between wind-driven turbulent mixing and the thermocline-scale Rayleigh-number balance (Equation 4.19) (Dera, 1992; Stern, 1975). The thermohaline instability criterion (Equation 4.17) demonstrates that a statically stable column can be convectively unstable when $\beta S_z/\kappa_S > \alpha T_z/\kappa_T$, producing salt fingers of centimetre-scale width (Equation 4.18) that drive the slow vertical mixing on decadal timescales (Stern, 1975).

Wind-driven circulation rests on the Ekman–Sverdrup framework: the Ekman spiral (Equations 4.12–4.13) describes the rotation and exponential decay of current with depth within a boundary layer of thickness $\delta_E = \sqrt{2A_v/f}$ (Equation 4.14), and the depth-integrated Ekman transport is directed 90° to the right of the wind in the Northern Hemisphere (Equation 4.15) (Apel, 1988). The Sverdrup relation $M_y = (1/\beta)(\nabla \times \boldsymbol{\tau})_z$ (Equation 4.16) establishes that interior meridional transport is determined entirely by the wind stress curl, with the return flow concentrated in intense western boundary currents (Gulf Stream, Kuroshio) required by vorticity balance (Apel, 1988; Stern, 1975). Tidal dynamics add a periodic forcing described by the tide-generating potential (Equation 4.21), whose expansion into hundreds of constituents (Equation 4.22) produces the observed amphidromic systems and the spring–neap modulation governed by the dominant M_2 and S_2 harmonics (Apel, 1988). The geostrophic balance (Equations 4.23–4.24) relates sea surface slope to current velocity, while operational consequences—fresh water allowance, under-keel clearance, and the ice formation sequence from frazil through multi-year pack (Cornish & Ives, 2009)—translate the underlying physics into direct maritime significance.

Tupper, 2001). Hooke's law ($\sigma = Y\varepsilon$), extended through the buckling formulae of Euler (Equation 5.14) and Bryan (Equation 5.15), governs the slenderness limits of compressed plating, while the Johnson–Ostenfeld correction bridges the elastic and inelastic buckling regimes (Campbell, 2025; Rawson & Tupper, 2001).

Local and dynamic loading phenomena complete the structural picture. Shipping water events impose quasi-static vertical deck loads that scale with bore steepness ($F^* \approx 0.08$–0.53), and the backflow phase generates loads 64–86% as large as the forward impact, demanding consideration in design (Hernández-Fontes et al., 2020). Fatigue, assessed through the S–N relation (Equation 5.16) and the Palmgren–Miner accumulation rule (Equation 5.17), is the life-limiting failure mode for welded connections in the splash zone: spectral and time-domain analyses for a Panamax container vessel both predicted fatigue lives of only 6.7–7.1 years, well below the 20-year design target, with moderate-to-severe sea states contributing 80% of the total damage despite less than 20% of the operational exposure (Li et al., 2013). The torsion equation $T/J = \tau/r = G\theta/l$ sizes the propeller shaft, and coupled lateral–torsional shaft dynamics can amplify aft-body vibration when blade-rate excitation coincides with structural resonances (Russell et al., 2015; Sutulo & Guedes Soares, 2023).

The probabilistic framework of structural reliability introduces the reliability index $\beta = \Phi^{-1}(1 - P_f)$ (Equation 5.25) and the redundancy indices RI_1 and RI_2 (Equations 5.26–5.27) as unified measures of safety and damage tolerance. Corrosion wastage, modelled by the power law $r(t) = C_1(t - T_c)^{C_2}$ (Equation 5.22), drives a monotonic decline in hull girder capacity—from $\beta \approx 5.3$ at new-build to $\beta \approx 3.1$ after 25 years for the case study vessel—demonstrating that static safety factors alone cannot guarantee adequate safety over the vessel's lifetime (Decò et al., 2012). Longitudinal framing, adopted in large tankers and bulk carriers, increases the critical buckling stress by reducing unsupported panel widths in the direction of dominant compression, a principle validated by section modulus measurement and the bending stress formula (United States Naval Academy, 2021).

tion 6.6) and Wilson's empirical formula (Equation 6.7) yield typical ocean values of 1430–$1580\,\mathrm{m\,s^{-1}}$, with temperature the dominant variable ($+3.5\,\mathrm{m\,s^{-1}}$ per °C) (Dera, 1992). The resulting vertical sound speed profile—decreasing through the thermocline and increasing under hydrostatic pressure—creates the SOFAR channel at approximately 400–$1200\,\mathrm{m}$ depth, where continuous refraction traps acoustic energy and enables propagation over thousands of kilometres (Urick, 1983). The enormous acoustic impedance mismatch at the air–sea interface ($Z_{\text{sea}}/Z_{\text{air}} \approx 3700$, Equation 6.9) effectively confines underwater sound to the ocean.

Transmission loss combines geometric spreading—spherical divergence yields -6 dB per doubling of distance—with frequency-dependent absorption arising from three chemical relaxation processes: boric acid ($f_r \sim 1\,\mathrm{kHz}$), magnesium sulphate ($f_r \sim 100\,\mathrm{kHz}$), and viscous losses at higher frequencies (Equations 6.16 and 6.17) (Campbell, 2025; Dera, 1992). The Doppler effect (Equation 6.18) underpins the Acoustic Doppler Current Profiler (ADCP), in which the fractional frequency shift of backscattered signals yields current velocity profiles throughout the water column (Campbell, 2025).

Sections 8.4.2 and 8.4.5 address the fuel carbon intensity. The life cycle impact assessment framework (Equation 8.5) provides the analytical tool for comparing these options on a consistent well-to-wake basis.

The environmental trade-offs are complex: scrubbers (Section 8.4.1) solve the air quality problem but transfer pollutants to the water; LNG eliminates SO_x but introduces methane slip risk; antifouling coatings (Section 8.4.4) reduce resistance and emissions but may release biocides to the marine environment. The optimization of these trade-offs requires the quantitative physics-based analysis developed throughout this chapter, underpinned by the fundamental oceanographic properties—optical, acoustic, and thermodynamic—of the marine environment (Clark, 2001; Dera, 1992; Guedes Soares & Santos, 2015).

8.6 Conclusion

The environmental physics of maritime operations links the fundamental properties of seawater—density, optical absorption and scattering, acoustic propagation—to the assessment of anthropogenic impacts. Suspended particles in seawater follow the Junge distribution $N_c(D) = k\,D^{-m}$ (Equation 8.2), with the concentration coefficient k spanning orders of magnitude between open ocean ($\sim 10^4$) and coastal/harbour waters ($\sim 10^7$–10^8) (Dera, 1992). This particle population governs the optical clarity of the water column: anthropogenic inputs from dredging, ballast water discharge, and land-based runoff alter the natural size distribution, raising the attenuation coefficient and reducing the euphotic zone depth with direct consequences for ecosystem productivity (Clark, 2001). The bottom-up trip emission framework (Equation 8.1) quantifies operational emissions from fuel consumption and engine-specific emission factors, while the life cycle impact assessment (Equation 8.5) extends the analysis across the vessel's full cradle-to-grave trajectory, with the operational phase dominating all impact categories at $>$94% of the total (Guedes Soares & Santos, 2015). The regression-based link between hull block coefficient C_B (Equation 8.3) and annual emissions enables environmental performance to be considered as early as the pre-design stage, bridging hull form hydrodynamics (see the *Fluid Dynamics and Ship Resistance* chapter of the companion volume) and environmental regulation (Guedes Soares & Santos, 2015; Papanikolaou, 2014).

4. Real-time model updating: Developing online learning capabilities to incorporate new observations and adapt to climate trends would maintain performance as conditions evolve.

5. Integration of additional data sources: Combining MERRA-2 with other satellite products (e.g., MODIS cloud properties, GPM precipitation) and ground-based measurements could enhance prediction accuracy.

This work demonstrates that the combination of high-quality Earth observation data, thoughtful feature engineering, and stateof-the-art machine learning techniques can deliver practical, reliable tools for weather-dependent decision-making. The opensource implementation enables other researchers and practitioners to build upon this foundation and adapt it to their specific needs.

değildir [23]. Diferansiyel Gizlilik, matematiksel kesinliği ve dinamik veri akışlarına uyumu sayesinde, bu iki yaklaşım arasında umut verici bir denge noktası olarak görünüyor [24].

6.2. Yükselen Teknolojiler ve Gelecek Araştırma Yönelimleri

Gelecekteki araştırmaların, büyük verinin zorluklarını aşmak için mevcut teknolojileri geliştirmeye ve yeni paradigmalar oluşturmaya odaklanması gerekiyor [24].

Ölçeklenebilir Gizlilik ve Güvenlik Çözümleri: Büyük verinin ölçeği, güvenlik ve gizlilik modellerinin, özellikle MapReduce gibi dağıtık çerçeveleri kullanarak optimize edilmesini gerektiriyor. Gerçek zamanlı yüksek hızlı veri işleme ihtiyacına yanıt verecek, kaynak tüketimini dengeleyen çözümler geliştirilmelidir [25].

Yapay Zekâ ve Makine Öğrenimi Entegrasyonu: Makine öğrenimi (ML) ve derin öğrenme (DL), büyük veri analitiği için hayati öneme sahiptir. Gelecekteki çalışmalar, karmaşık, dengesiz ve heterojen veri kümeleriyle başa çıkmak için (örneğin DL'yi büyük veri analitiğine entegre etmek veya boyut azaltma tekniklerini geliştirmek) optimize edilmiş, özel ML modelleri oluşturmaya odaklanmalıdır [25].

Kuantum Bilişim Etkisi: Kuantum bilişim, mevcut şifreleme şemalarının güvenliğini potansiyel olarak tehdit edebileceğinden, post-kuantum kriptografi alanındaki çalışmalar, büyük veri güvenliğini geleceğe taşımak için kritik hale gelecektir [26].

Blockchain Uygulamaları: Blockchain'in merkezi olmayan doğası, büyük veri ortamlarında veri denetimi (audit) ve değişmezlik (immutability) sağlayarak güvenliği artırma potansiyeline sahiptir [26].

Etik ve Şeffaflık: Yapay zekâ kararlarının açıklanabilirliği (Explainable AI - XAI) ve etik veri uygulamaları, özellikle akıllı şehirler ve telekomünikasyon gibi hassas sektörlerdeki gelecekteki araştırma eğilimlerindendir [27].

7. Sonuç

Büyük veri, sunduğu analitik ve öngörü yetenekleri sayesinde günümüzün en değerli kaynağıdır. Geleneksel güvenlik yaklaşımları, verinin hacmi, hızı ve çeşitliliği karşısında yetersiz kalırken, Homomorfik Şifreleme, Diferansiyel Gizlilik ve gelişmiş anonimleştirme teknikleri, bu yeni tehditlere karşı umut verici çözümler sunmaktadır [27].

Bu alandaki ilerleme, büyük veri sistemlerinin (özellikle Hadoop) kendisinin güvenlik mimarisine dahil edilen, ölçeklenebilir, dinamik ve hibrit koruma mekanizmalarının geliştirilmesine bağlıdır. Gelecekteki çalışmaların, özellikle gizlilik ve veri faydası arasındaki hassas dengeyi gözeterek, makine öğrenimi ve kuantum bilişimi gibi teknolojileri büyük veri güvenliğine entegre etmeye odaklanması gerekmektedir [28].

4.0'ın etkin biçimde uygulandığı tesislerde makineler, kestirimci bakım için gerekli veriyi üreten bütünleşik bir ağ yapısı oluşturmakta ve ortak çalışabilirlik sağlamaktadır. Bu bağlamda kestirimci bakımın temel unsurları olan bulut bilişim, endüstriyel büyük veri ve akıllı fabrika konseptleri hızla yaygınlaşmakta; fabrikaların veri depolama, işleme ve analiz altyapılarına erişimi kolaylaşarak kestirimci bakımın uygulanabilirliği önemli ölçüde artmaktadır.

Kestirimci bakım uygulamaları, geçmiş verilerden yararlanarak ekipmanların gelecekteki durumunu tahmin etmeyi mümkün kılar. Bu nedenle geçmiş verinin doğruluğu, bütünlüğü ve güvenilirliği tahmin modellerinin başarı düzeyini belirleyen en kritik unsurlardır. Etkin bir kestirimci bakım sistemi için ilk adım, doğru amaçların ve uygun veri noktalarının belirlenmesidir. Doğru sensörlerin entegrasyonu, makineden gerçek zamanlı ve yüksek kalitede veri toplanmasını sağlayarak arıza davranışlarının daha sağlıklı izlenmesine katkıda bulunur. Veri hazırlama süreçleri ve veri kalitesi, tüm tahmine dayalı modeller için temel girdilerdir; veri kalitesi arttıkça model performansı ve tahmin doğruluğu da yükselir. Bu durum, kestirimci bakım stratejisinin başarısını güçlendirerek işletmelerin varlıklarını sürdürülebilir ve rekabetçi bir şekilde yönetmesine olanak tanır.

Sonuç olarak kestirimci bakım, statik bir hedef değil; sürekli iyileştirme gerektiren dinamik bir süreç olup işletmenin olgunluk düzeyi arttıkça geliştirilmesi gereken bir yolculuk olarak değerlendirilmelidir.

durumunda paralel akışlı duruma göre daha yüksek performans sergilemiştir.

- Gövde borulu ısı değiştiricinin sıcaklığa olan duyarlılığı diğer 2 tip ısı değiştiriciden daha fazla olmuştur. Yani besleme suyu sıcaklığının artışı gövde borulu ısı değiştiricide diğer ısı değiştirici tiplerinden daha etkin performans artışı olmuştur.
- Gövde borulu ısı değiştirici de karşıt akışlı durum paralel akışlı duruma ortalama olarak %3.87 kadar daha iyi güç yoğunluğu sağlamıştır.
- Çift borulu ısı değiştirici de karşıt akışlı durum paralel akışlı duruma ortalama olarak %3.89 kadar daha iyi güç yoğunluğu sağlamıştır.
- Plakalı ısı değiştirici de karşıt akışlı durum paralel akışlı duruma ortalama olarak %11.53 kadar daha iyi güç yoğunluğu sağlamıştır.
- Akış yönünün etkisi en fazla plakalı ısı değiştiricinin güç yoğunluğunu etkilemiştir. Çift borulu ve gövde borulu tip ısı değiştiricilerin güç yoğunluğunu ise yaklaşık olarak aynı düzeyde etkilemiştir. Buradan akış yönünün farklı tip ısı değiştiricilerde farklı etkilere sebep olduğu sonucuna varılmıştır.
- Karşıt akışlı durumda gövde borulu ısı değiştirici çift borulu tip ısı değiştiriciye göre ortalama olarak % 19.06 daha iyi güç yoğunluğu değeri sağlarken, plakalı tip ısı değiştirici çift borulu tip ısı değiştiriciye göre ortalama olarak % 9.09 daha iyi güç yoğunluğu değeri sağlamıştır.
- Paralel akışlı durumda gövde borulu ısı değiştirici çift borulu tip ısı değiştiriciye göre ortalama olarak % 18.08 daha iyi güç yoğunluğu değeri sağlarken, plakalı tip ısı değiştirici çift borulu tip ısı değiştiriciye göre ortalama olarak % 1.61 daha iyi güç yoğunluğu değeri sağlamıştır.
- Kıyaslanan ısı değiştirici tiplerinden birim alan için en yüksek performanslı olandan en düşük performanslı olana doğru sırasıyla; gövde borulu ısı değiştirici, plakalı ısı değiştirici ve çift borulu ısı değiştirici olduğu tespit edilmiştir.

Optimal pozlama ayarlarının seçilmesiyle daha net ve kontrastlı görüntüler elde edilmiş, bu da ortofoto ve sayısal model üretiminde hata oranlarını azaltmıştır. Çalışma, özellikle amatör kullanıcılar ve yeni başlayanlar için önemli teknik öneriler sunmaktadır. Farklı uçuş yükseklikleri ve pozlama ayarlarının görüntü kalitesine etkisi incelenmiştir.[50]

8.SONUÇ

İHA teknolojileri, gelişmiş sensörler ve analiz algoritmaları ile birleştirildiğinde, pek çok sektörde karar verme süreçlerini hızlandırmakta, maliyetleri azaltmakta ve insan güvenliğini artırmaktadır. Bu çalışma kapsamında özetlenen 50 başlık, İHA'ların çok disiplinli kullanım potansiyelini gözler önüne sermektedir. Her bir uygulama, belirli bir probleme yenilikçi bir çözüm sunarken, akademik ve sektörel düzeyde gelişimin önünü açmaktadır.

Bu çalışmada, COVID-19 pandemisinin küresel askeri harcamalar üzerindeki etkisi Stockholm Uluslararası Barış Araştırmaları Enstitüsü (SIPRI) verileri ışığında analiz edilmiştir. Pandemi döneminde ekonomik daralmalara rağmen birçok ülkenin askeri harcamalarında artış eğilimini sürdürmesi, "güvenlik harcamalarının esnekliği" şeklinde kavramsallaştırılmıştır. Özellikle ABD, Çin, Hindistan ve Rusya gibi büyük aktörlerin savunma bütçelerinde ciddi bir kesinti yapmaması, güvenlik stratejilerinin ekonomi politikaları üzerinde nasıl öncelikli olduğunu göstermektedir. Gelişmekte olan ülkelerde ise savunma harcamalarının daha çok iç güvenlik, sınır savunması ve sağlık sektörüne paralel sivil-asker işbirliği projelerine yönlendirildiği belirtilmiştir. Bu durumun uzun vadede, hibrit tehditlere karşı daha entegre güvenlik politikaları oluşturma zorunluluğu doğuracağı ifade edilmektedir.[30]

8.2. Hipersonik Füzelere Karşı Savunma Sistemleri: Yetersizlikler, Yenilikler ve Gelecek Senaryoları

Bu makalede, hipersonik füze sistemlerine karşı mevcut savunma sistemlerinin yetersizliği ve bu açığı kapatmaya yönelik geliştirilmekte olan teknolojiler değerlendirilmiştir. Halihazırda kullanılan balistik füze savunma sistemleri (ör. THAAD, Patriot, S-400) hipersonik füzelerin manevra kabiliyeti, alçak irtifa seyri ve yüksek hızına karşı etkisiz kalmaktadır. Çalışma, özellikle "glide vehicle" tipi planörlerin önlenememesi sorununu vurgulayarak, klasik radar sistemlerinin hipersonik hedefleri algılamada yaşadığı gecikmeyi teknik verilerle açıklamaktadır. Ayrıca ABD'nin GPI, Glide Breaker gibi yeni projeleri, Çin'in hipersonik karşı radar sistemleri ve Avrupa'nın lazer temelli önleme teknolojileri örneklenmiştir. Makale, etkili bir hipersonik savunma mimarisinin sadece füze değil; erken uyarı uyduları, yapay zekâ destekli veri işleme ve hava-uzay radarlarının bütünleşik şekilde çalıştığı yeni nesil bir sistem gerektirdiğini ileri sürmektedir.[31]

9.Sonuç

Bu literatür taraması, hipersonik füze sistemlerinin sadece askeri değil; diplomatik, teknolojik, etik ve hukuki alanlarda da çok yönlü sonuçlar doğurduğunu göstermektedir. Literatür, gelecekteki savaşların doğasının değişeceğini ve bu değişimin yalnızca büyük güçleri değil, tüm devletleri ve uluslararası düzeni etkileyeceğini ortaya koymaktadır. Tüm bu gelişmeler karşısında, savunma planlayıcılarının ve karar vericilerin sadece silah sistemleri değil, bilgi sistemleri, hukuk altyapısı ve diplomatik kanalları da eşzamanlı olarak yeniden yapılandırması gerekmektedir.

For future research, several directions remain promising. One key area involves developing adaptive and self-tuning variants of HHO that can automatically adjust control parameters during runtime, enhancing generalization in dynamic or noisy environments. Integration with emerging paradigms such as quantum-inspired optimization, federated learning, or explainable AI could further broaden the algorithm's relevance. In addition, deeper theoretical analysis regarding convergence behavior and complexity is needed to strengthen the mathematical foundations of HHO and its variants.

Finally, promoting ethical research practices such as detailed parameter disclosure, fair benchmarking protocols, and open access to code and data will play a vital role in increasing transparency, reproducibility, and collaboration within the optimization community. Expanding HHO's application scope to include sustainability, healthcare diagnostics, and intelligent infrastructure systems may help translate its computational success into real-world societal impact.

Effectiveness of the Database Matching Mechanism

Matching the structured notes obtained from the LLM against the database is the final step where the system delivers value to the user. The developed system demonstrated a high success rate in converting users' complex, subjective scent preferences into quantitative, structured data. The system's fundamental success lies in its lowlatency response capability achieved using the Groq platform and cost-effective LLMs.

Future Work:

- **Weighting Mechanism:** The current system only uses the number of note matches. In the future, recommendation sensitivity can be increased by integrating weighting algorithms such as TF-IDF that consider the importance of notes (e.g., higher weight if "vanilla" is a main note) or a structure that assigns different weights to Top/Middle/Base notes.
- **User Feedback:** The system can be enriched with a machine learning component that continuously improves its performance by collecting real user feedback (e.g., liked/disliked recommendations) and adding a Scoring or Rating Mechanism.
- **More Comprehensive Database:** A dynamic database connection can be provided, specifically to include niche brands and newly released perfumes.

In conclusion, this study has laid the foundation for an innovative and commercially viable perfume recommendation system that combines natural language processing with traditional database lookups, optimized for cost and performance.

Bu doğrultuda, batarya geri dönüşüm süreçlerinin verimliliğinin artırılması ve çevresel etkilerinin en aza indirilmesi amacıyla; mevcut geri dönüşüm teknolojilerinin iyileştirilmesi, inovatif ve düşük çevresel etkili yöntemlerin geliştirilmesine yönelik Ar-Ge faaliyetlerinin desteklenmesi, yasal gerekliliklerin güçlendirilmesi elzemdir. Ayrıca, batarya atıklarının yönetim sistemlerinin oluşturulması ve bu alandaki uluslararası iş birliklerinin artırılması da, sürdürülebilir bir geri dönüşüm açısından önemli bir gerekliliktir.

5. Literatürdeki Eksikliklerin Tartışılması

Tarama sonuçları, literatürde aşağıdaki eksikliklerin bulunduğunu ortaya koymuştur:

•Radar–görüntü füzyonu için ortak, büyük ölçekli, standart bir veri seti bulunmamaktadır.

•Pek çok füzyon çalışması kara hedeflerine odaklanmış olup hava hedefleri özelinde çalışma sayısı sınırlıdır.

•Radar ve kamera sensörlerinin eş zamanlı kalibrasyon ve hizalama süreçleri metodolojik olarak yeterince açıklanmamıştır.

•Gerçek operasyonel koşullarda test edilmiş füzyon modelleri oldukça sınırlıdır.

•Hesaplama maliyeti yüksek olan füzyon modellerinin gerçek zamanlı sistemlere uygulanması hâlâ araştırma bekleyen bir konudur.

Bu eksiklikler sensör füzyonunun potansiyeline rağmen uygulamadaki bazı engellerin devam ettiğini göstermektedir.

6. Genel Değerlendirme

Bu çalışma kapsamında elde edilen bulgular, radar ve görüntü verilerinin tek başına kullanıldığı durumların belirli avantajlar sunmakla birlikte birçok senaryoda sınırlı kaldığını göstermektedir. Sensör füzyonu ise her iki yönteminin güçlü yanlarını bir araya getirerek daha yüksek doğruluk, daha düşük hata oranı ve daha kararlı performans sağlamaktadır. Literatürün genel eğilimi, sensör füzyonunun hava hedefi tespiti ve sınıflandırması için en etkili yaklaşım olduğu yönündedir.

Şekil 4. Devrenin PCB Tasarımı.

Sonuç ve Tartışma

Bu çalışmada, düşük maliyetli bileşenlerle PID tabanlı tek eksenli bir açısal dengeleme sistemi tasarlanmış ve simülasyon ortamında test edilmiştir. Elde edilen sonuçlar, sistemin hızlı ve kararlı bir şekilde dengeye ulaştığını göstermektedir.

Sistemde kullanılan LM2596 ve LM2576T regülatörleri sayesinde hem servo motor hem de mikrodenetleyici için kararlı besleme sağlanmıştır. PID kazançlarının uygun seçilmesi, servo motorun ani hareketlerinde titreşimsiz tepki elde edilmesini sağlamıştır.

İlerleyen çalışmalarda sistemin donanım üretimi tamamlanarak gerçek zamanlı testlerinin yapılması, çift eksenli kontrol yapısına geçilmesi ve adaptif PID algoritmalarının eklenmesi planlanmaktadır.

[20] Yasin Güneş, İsmail Kocabaş – PID Denetleyici ile Tek Serbestlik Dereceli Sarkaç Sisteminin Kontrolü – 2017

Yapılan testler sonucunda cihazın kısa devre ve aşırı akım koşullarında güvenli şekilde çalıştığı, hem AC hem de DC tarafındaki koruma elemanlarının etkili olduğu görülmüştür. Geliştirilen prototipin düşük maliyetli bileşenlerle üretilebilir olması, sistemin eğitim, hobi elektroniği ve temel laboratuvar uygulamaları için uygun bir alternatif oluşturduğunu göstermektedir.

Genel olarak çalışma, doğrusal regülatörün düşük gürültü ve kararlılık avantajlarını korurken geniş çıkış aralığı ve kullanıcı dostu izleme özellikleri sunan işlevsel bir güç kaynağı ortaya koymuştur. İlerleyen çalışmalarda, verimliliği artırmak amacıyla lineer regülatör öncesine anahtarlamalı bir ön regülatör eklenmesi, mikrodenetleyici tabanlı dijital kontrol yöntemlerinin kullanılması ve tam yük altında ısınmayı azaltacak soğutma çözümlerinin geliştirilmesi önerilmektedir.

Gelecek çalışmalarda çift katmanlı bir PCB tasarımı kullanarak güç ve sinyal yollarının birbirinden tam olarak izole edilmesi sağlanabilir. Ayrıca sisteme kapalı döngü kontrolü eklenebilir (PID vb.).

Genel olarak değerlendirildiğinde, bu çalışma düşük maliyetli ve yaygın bileşenlerle, 5V'luk mikrodenetleyici platformlarında yüksek güçlü DC motorların sürülmesi problemine odaklanan, donanım temelli pratik bir çözüm sunmuştur.

planlanmaktadır. Bu süreç, "Materyal ve Metot" bölümünde açıklanan tasarım hedeflerine ulaşılıp ulaşılmadığını test edecektir.

1. Prototip kart üzerine SMD ve DIP bileşenlerin lehimleme işlemleri tamamlandıktan sonra, sisteme enerji verilmeden önce tüm güç (VCC) ve toprak (GND) hatları üzerinde multimetre ile kısa devre ve açık devre kontrolleri yapılacaktır [kaynak 28]. Bu temel doğrulama, olası montaj veya üretim hatalarını tespit etmek için kritiktir. Başarılı olursa, kartın regülatör katmanlarının (12V-5V ve 5V-3.3V) çıkış voltajları doğrulanacaktır.
2. Haberleşme ve veri aktarım hatlarının kararlılığının test edilmesi amacıyla bir dijital osiloskop kullanılacaktır. Özellikle yüksek hızlı SPI (SD Kart, MAX6675) ve UART (LoRa telemetri) protokollerinin sinyal bütünlüğü incelenecektir. Bu sayede, veri iletiminde olası gürültü (noise) veya parazitlenme durumları, yazılım entegrasyonuna geçilmeden önce donanımsal düzeyde tespit edilecektir.
3. Donanım doğrulamasını takiben, STM32 mikrodenetleyiciye geliştirilen modüler kod yüklenecektir. Bu aşamada:
   Sensör Veri Okunabilirliği: MQ-8 (Gaz), MAX6675 (Sıcaklık) ve LTV-817S (Hız) sensörlerinden gelen verilerin doğru ve kararlı bir şekilde okunup okunmadığı gözlemlenecektir.

Güvenlik Mekanizması Testi: Sistemin en kritik fonksiyonu olan otonom koruma test edilecektir. Simüle edilmiş bir alarm durumu (örneğin, MQ-8 sensörüne kontrollü gaz verilmesi veya termokuplun ısıtılması) yaratılarak, belirlenen eşik değer aşıldığında ilgili güvenlik rölesinin güç hattını başarıyla kesip kesmediği doğrulanacaktır.
Telemetri ve Kayıt Testi: Toplanan verilerin LoRa modülü ile yer istasyonuna hatasız iletildiği ve eş zamanlı olarak SD karta zaman damgalı olarak kaydedildiği teyit edilecektir.

Bu test sürecinden elde edilecek bulgular, sistemin bütünsel olarak doğrulanmasını sağlayacaktır. Eklenen sonuç hem donanım hem de yazılım bileşenlerinin senkronize biçimde çalışarak, hidrojenli araçlar için kararlı, güvenilir ve tasarım hedeflerine uygun bir kontrol prototipi elde etmektir. Test sonuçlarına göre, özellikle sensör hassasiyet eşik değerleri veya zamanlama parametreleri gibi yazılımsal değişkenler üzerinde kalibrasyon ve revizyonlar yapılacaktır.

SONUÇ

Bu çalışmada, hidrojenli araçlar için kritik öneme sahip olan güvenlik parametrelerinin izlenmesi amacıyla sensör tabanlı bir araç kontrol kartı tasarlanmış ve prototipi üretilmiştir. STM32 mikrodenetleyicisi ve çoklu sensör mimarisi ile araç içi güvenlik otonom hale getirilmiştir. Gelecek çalışmalarda, sistemin yapay zekâ
Algoritmaları ile desteklenerek kestirimci bakım özelliklerinin eklenmesi hedeflenmektedir.

kanıtlanmıştır. Tasarım ve Modelleme bölümünde hesaplanan teorik değerler, deneysel ölçümlerle güçlü bir uyum göstermiştir. Teorik görev döngüsü D hesaplamaları (D=12V 0.333 ve D=3V 0.083), deneysel ortamda potansiyometre (RV1) ile elde edilen değerlere çok yakın bulunmuştur. Özellikle 12V çıkış seviyesi için, potansiyometre ayarının yaklaşık %92'de tutulmasıyla görev döngüsünün doğru bir şekilde ayarlandığı doğrulanmıştır.25kHz anahtarlama frekansı, 100uH indüktör (L_1) ve 2200uF kapasitör (C_5) filtreleme elemanları ile teorik olarak $\triangle$ Vo=7.27 mV olarak hesaplanan değer, deneysel yük testlerinde 10mV altında ölçülmüştür. Bu düşük dalgalanma seviyesi, seçilen pasif elemanların yüksek kaliteli ve kararlı bir çıkış gerilimi sağladığını göstermiştir. İndüktör Akımı ($\triangle$IL=5A tam yük koşullarında indüktör akım dalgalanması, hesaplanan 3.2A değerine yakın bulunmuş ve devrenin sürekli iletim modunda (CCM) çalıştığı doğrulanmıştır.

Dönüştürücünün verimlilik performansı, farklı yük akımları altında incelenmiştir. Tam yükte (5A) elde edilen verimlilik değerleri, tasarımın ana hedefine ulaştığını göstermiştir. Elde edilen maksimum verimlilik değerlerinin %90'ın altında kalmasının ana nedeni, devrede kullanılan yarı iletken elemanların türüdür. Güç anahtarı olarak TIP142 BJT kullanılması, düşük maliyetli bir çözüm sunsa da, yüksek iletim direnci ve doyum gerilimi nedeniyle anahtarlama sırasında ve iletim durumunda önemli ölçüde güç kaybına yol açmıştır. İlerideki çalışmalarda BJT yerine daha düşük iletim direncine sahip mosfet kullanılması ve serbest geçiş diyotu olarak daha düşük eşik gerilimine sahip Schottky Diyot seçilmesi (ki bu tasarımda zaten yapılmıştır) ile verimliliğin %95 seviyelerinin üzerine çıkarılması mümkündür. Tasarım, düşük maliyetli TL494 kontrolü ile gerçekleştirilmesine rağmen, kritik mühendislik gereksinimlerini karşılamıştır. Devrenin fiziksel uygulaması aşamasında PCB tasarımı üzerinde güç ve sinyal yollarının dikkatli ayrımı ve termal yönetim odaklı bileşen yerleşimi, elde edilen kararlı deneysel sonuçların önemli bir bileşeni olmuştur. Sonuç olarak, TL494 tabanlı bu Buck dönüştürücü prototipi, basit ve uygun maliyetli güç elektroniği çözümleri arayan laboratuvar ve gömülü sistem uygulamaları için pratik ve güvenilir bir çözüm sunmaktadır.

SONUÇ

Bu çalışmada 240w 24v bir fırçasız DC motor için hız ve yön kontorlünü verimli ve ucuz bir şekilde yöneten bir kart tasarlanıp üretilmiştir.

Simülasyonda ve diğer çalışmalardan alınan bilgiler ışığında parçalar seçilmiş maaliyet analizi yapılıp kart tasarımı çıkarılmıştır.

sonuç, sistemin doğru tasarlandığını ve LC devresinin hedeflenen çalışma frekansını sağlıklı şekilde oluşturduğunu göstermektedir.

Açısal frekans ve endüktif reaktans hesaplamaları sonucunda bobinin rezonans noktasındaki empedansının yaklaşık 28 Ω olduğu bulunmuştur. Bu değer, güç elektroniği sürücüsünün bobini kararlı şekilde sürebilmesi için uygun bir empedans seviyesidir. Q faktörü hesaplamaları, sistemin rezonans davranışını etkileyen en kritik parametrelerden biridir. Q = 20 ve Q = 50 hedeflerine göre hesaplanan seri direnç değerleri sırasıyla 1.4 Ω ve 0.56 Ω olup bobinin pratikte bu değerlere yakın davranması sistemin yüksek verimle çalışmasını desteklemiştir. Ferrit çekirdek kullanımı ve sarım geometrisi bu düşük kayıpların elde edilmesinde etkili olmuştur.

Güç aktarımı açısından bakıldığında, verici bobine uygulanan 540 W gücün, sistem verimliliği %86.2 kabul edildiğinde alıcı tarafta yaklaşık 465 W olarak elde edildiği görülmüştür. Deneysel sonuçlar teorik sonuçlarla uyumlu olup, ölçülen gerilim–akım değerleri ve osiloskop sinyalleri sistemin rezonans frekansında kararlı çalıştığını göstermiştir. Yaklaşık 74.5 W'lık toplam güç kaybı, bakır kayıpları, dielektrik kayıplar, parazitik etkiler, sızıntı akıları ve sürücü devresinin anahtarlama kayıpları kaynaklıdır. Bu kayıpların düşürülmesi için ferrit malzeme kalitesinin artırılması, daha kalın tel kullanımı ve daha yüksek Q faktörlü bileşenlerin tercih edilmesi önerilmektedir.

Bobinler arası mesafe ve hizalama, aktarım verimini doğrudan etkileyen en önemli iki parametre olarak gözlemlenmiştir. Özellikle bobinler arasındaki kuplaj katsayısı (k) azaldığında verim hızlı şekilde düşmektedir. Deneylerde bobinlerin doğru hizalandığı ve optimum mesafede konumlandırıldığı durumda sistemin kararlı çalıştığı görülmüştür. Ayrıca PCB tasarımındaki parazit azaltıcı düzenlemeler, ölçüm sonuçlarına olumlu etki etmiş ve frekans kaymasını minimum seviyede tutmuştur.

Sonuç olarak, teorik ve deneysel verilerin uyumlu olması, tasarlanan kablosuz güç aktarım sisteminin hem hesaplamalar hem de fiziksel testler açısından başarılı olduğunu göstermektedir. Sistem, 100 kHz civarında kararlı çalışmış, hedeflenen %86.2 verim seviyesine ulaşmış ve tasarlanan bobin–kapasitör yapısı beklendiği gibi performans göstermiştir. Bu çalışma, orta güç seviyesinde çalışan kablosuz enerji aktarım sistemleri için uygulanabilir ve güvenilir bir referans noktası oluşturmakta; gelecekte daha yüksek verim, daha uzun mesafe ve daha düşük kayıplı sistemler için temel altyapı sağlamaktadır.

zorladığı ifade edilmektedir. Bu nedenle sistemde LM317'nin girişine yerleştirilen aktif kelepçe yapısına sahip pre-regülatör devresi, yüksek gerilim darbelerini sınırlayarak hem regülatörü hem de aküyü güvence altına almıştır.

Alternatif çözümler arasında anahtarlamalı DC-DC dönüştürücüler bulunsa da, düşük güçlü rüzgâr türbinlerinde türbin hızına bağlı olarak giriş geriliminin aşırı geniş aralıkta değişmesi bu yapılarda kararlılık problemlerine neden olabilmektedir. Ayrıca bu dönüştürücülerin yüksek maliyeti ve EMI kaynaklı gürültü sorunları, özellikle mikrodenetleyici tabanlı hassas ölçüm sistemlerinde ek filtreleme ihtiyacı doğurmaktadır. Bu nedenle çalışmada seçilen LM317 + pre-regülatör kombinasyonu, düşük maliyetli ve kararlı bir çözüm olarak öne çıkmaktadır. Elde edilen deneysel sonuçlar, regülatör çıkışının 14.4 V seviyesinde sabit kaldığını ve akünün güvenli bir şekilde şarj edildiğini göstermektedir.

Sistem performansının değerlendirilmesinde, akım ve gerilim ölçümlerinin doğruluğu kritik bir parametre olmuştur. ACS712 akım sensörünün Hall etkili yapısı sayesinde türbin çıkış akımı temassız şekilde ölçülmüş, bu da hem elektriksel güvenliği hem de ölçüm doğruluğunu artırmıştır. Gerilim ölçüm devresinde kullanılan yüksek oranlı direnç bölücü sayesinde STM32 mikrodenetleyicinin ADC girişine 0–3.3 V aralığında güvenilir bir ölçüm sinyali aktarılmıştır. Deneysel çalışmalar sırasında yüksek giriş gerilimlerinde ADC okuma kararlılığının korunduğu, RC filtre yapısı sayesinde gürültünün büyük oranda bastırıldığı gözlemlenmiştir.

Rüzgâr türbininin mekanik performansı, rotor miline yerleştirilen mıknatıs ve US1881 Hall Effect sensörü ile ölçülen RPM değerleri üzerinden incelenmiştir. Sensörün dijital çıkışının kesme tabanlı okuma yöntemi ile işlenmesi, türbinin düşük hızlardan yüksek hızlara kadar geniş bir aralıkta hassas RPM ölçümü yapmasına imkân sağlamıştır. Elde edilen sonuçlar, rüzgâr hızındaki değişimlerin sistem tarafından anlık olarak algılandığını ve OLED ekranda gecikme olmadan görüntülendiğini göstermektedir.

Sistem genelinde yapılan testlerde, şarj devresi, akım–gerilim ölçüm devreleri ve RPM ölçüm yapısının birlikte kararlı çalıştığı doğrulanmıştır. Pre-regülatör sayesinde LM317'nin aşırı ısınması engellenmiş, akünün tam şarj değerine ulaştığı koşullarda CV bölgesine geçiş doğru bir şekilde gözlemlenmiştir. Aynı zamanda ekran üzerinden alınan verilerin, ölçüm devresi tasarımının doğruluğunu gösterir şekilde kararlı olduğu tespit edilmiştir.

Sonuç olarak, rüzgâr türbinlerinden elde edilen değişken enerjiyi hem güvenli hem de izlenebilir hâle getiren entegre bir izleme–kontrol sistemi geliştirilmiştir. Sistem düşük maliyetli, kurulumu kolay ve küçük güçlü rüzgâr türbinleri için uygulanabilir niteliktedir. Özellikle eğitim ve laboratuvar ortamlarında rüzgâr türbini performansının analiz edilmesi, batarya şarj süreçlerinin incelenmesi ve sensör tabanlı ölçüm tekniklerinin uygulanması açısından pratik ve etkili bir çözüm sunmaktadır. Elde edilen sonuçların, küçük ölçekli yenilenebilir enerji sistemlerinin tasarımında ve kontrol stratejilerinin geliştirilmesinde gelecekte yapılacak çalışmalara rehberlik edeceği düşünülmektedir.

Sayfa yükleme ve başlatma aşamasında kullanıcı tarayıcıdan ESP32'nin IP adresine bağlandığında sunucu HTML sayfasını ve CSS dosyalarını gönderir, JavaScript başlatma fonksiyonu devreye girer, kontrol butonlarına tıklama algılayıcıları atanır, periyodik veri güncelleme zamanlayıcısı başlatılır, sistem durumu ve aktüatör konumu için ilk veri çekimi yapılır. Veri güncelleme sisteminde her 500 milisaniyede bir ESP32'den güncel veri talep edilir, web arayüzü ESP32'nin /data adresine HTTP GET isteği gönderir, sunucudan JSON formatında yanıt gelir, gelen veriler işlendikten sonra arayüzdeki görsel elemanlar dinamik olarak güncellenir.

Kullanıcı etkileşimi buton kontrolleri şu şekildedir;

İLERİ butonu işlem akışında kullanıcı butona tıkladığında öncelikle buton geçici olarak devre dışı bırakılır, ESP32'nin /ileri adresine HTTP isteği gönderilir, kullanıcıya "Aktüatör açılıyor..." şeklinde bildirim gösterilir, ESP32'den yanıt geldikten sonra işlem başarılıysa yeşil onay mesajı, hata oluştuysa kırmızı uyarı mesajı gösterilir, yaklaşık bir saniye sonra buton tekrar aktif hale gelir. GERİ ÇEK butonu işlem akışı İLERİ butonu ile aynıdır, tek fark ESP32'nin /kapat adresine istek gönderilmesi ve motor sürücünün geri yönde hareket sinyali almasıdır, kullanıcıya "Aktüatör kapanıyor..." bildirimi gösterilir. DURDUR butonu işlem akışında acil durdurma butonu hiçbir zaman devre dışı bırakılmaz, butona basıldığında anında ESP32'nin /dur adresine istek gönderilir, sunucu bu komutu en yüksek öncelikle işler ve motor sürücüye durdurma sinyali iletir, kullanıcıya "Aktüatör durduruldu" şeklinde sarı renkli uyarı mesajı gösterilir.

SONUÇLAR VE TARTIŞMA

Bu çalışmada geliştirilen uzaktan konum kontrollü lineer aktüatör sisteminin performansı, maliyet analizi ve uygulama sonuçları bu bölümde detaylı olarak sunulmaktadır.

Geliştirilen sistemin avantajları şu şekilde sıralanabilir: Düşük maliyet, kolay kurulum, ölçeklenebilirlik, kullanıcı dostu arayüz (web tabanlı kolay kontrol), uzaktan erişim (Wi-Fi ile her yerden erişebilme).

Sistem, çeşitli uygulama alanlarında kullanılabilir potansiyele sahiptir. Endüstriyel otomasyon sistemlerinde hassas konum kontrolü gerektiren uygulamalarda, akıllı ev uygulamalarında perde ve pencere kontrolünde, tarım otomasyonunda sera havalandırma sistemlerinde, güneş paneli takip sistemlerinde güneşin konumuna göre panel pozisyonlamasında ve medikal cihazlar ile rehabilitasyon ekipmanlarında kullanılabilir.

Literatürde benzer çalışmalar incelendiğinde, Nava-Pintor ve arkadaşlarının [1] kamera tabanlı konum algılama sistemi kullanarak elde ettikleri hassasiyet ile bu çalışmada potansiyometre kullanılarak elde edilen hassasiyet karşılaştırılabilir düzeydedir. Awari ve arkadaşlarının [3] RF kontrollü sistemi ile karşılaştırıldığında, bu çalışmada Wi-Fi kullanılması daha geniş bir kontrol aralığı ve internet üzerinden erişim imkanı sağlamaktadır.

Platero-Horcajadas ve arkadaşlarının [5] sera kontrol sisteminde olduğu gibi, geliştirilen sistem de IoT teknolojileri ile entegre edilebilir yapıdadır. Ancak bu çalışmada geliştirilen sistem, daha düşük maliyetle ve daha basit kurulum ile benzer işlevselliği sağlamaktadır.

Sistemin geliştirilmesi için önerilen gelecek çalışmalar şunlardır: PID kontrol algoritması entegrasyonu ile hassasiyetin artırılması, çoklu aktüatör kontrolü için sistem genişletilmesi, Android ve iOS platformları için mobil uygulama geliştirilmesi, sıcaklık, basınç gibi farklı sensörlerin sisteme entegrasyonu, makine öğrenmesi algoritmaları ile otomatik konum öğrenme özelliğinin eklenmesi.

Deneysel çalışmalar sırasında karşılaşılan bazı sınırlamalar da bulunmaktadır. Wi-Fi bağlantısının kesintiye uğraması durumunda manuel kontrol imkanının olmaması, yüksek yük altında motor sürücünün ısınması nedeniyle duty cycle limitinin düşmesi, web arayüzünün eş zamanlı çoklu kullanıcı erişiminde performans düşüşü gözlemlenmesi bu sınırlamalar arasındadır. Bu sınırlamaların gelecek çalışmalarda ele alınması planlanmaktadır.

Sonuç olarak, geliştirilen uzaktan konum kontrollü lineer aktüatör sistemi, belirlenen hedeflere ulaşmış ve başarılı bir şekilde test edilmiştir. Sistemin düşük maliyeti, kolay uygulanabilirliği ve ölçeklenebilir yapısı, endüstriyel ve ticari uygulamalarda kullanım potansiyelini göstermektedir.

Çalışma Prensibi

Sistem, ESP32 mikrodenetleyicisi üzerinden hem manuel hem otomatik kontrol sağlar. Kullanıcı, mobil uygulama veya fiziksel butonlar aracılığıyla panjuru açabilir, kapatabilir veya sabit bir konuma taşıyabilir. Sensörlerden alınan veriler gerçek zamanlı olarak değerlendirilir:

- **Gaz/Duman algılandığında:**
  Panjur otomatik olarak açılır ve ortamın tahliyesi sağlanır.
- **Su algılandığında:**
  Camların kirlenmemesi için kapatılır.
- **Güneş ışığı yüksek ise:**
  Panjur yarı kapalı konuma getirilerek ısı yükü azaltılır.
- **Gece olduğunda:**
  Panjur otomatik kapanır.

Motor kontrol algoritması, step motorun belirli adım sayısına göre belirlenen pozisyona gitmesini sağlar. Motor yönü ULN2003 üzerinden yönetilir.

Sonuç

Bu çalışmada, düşük maliyetli bileşenler kullanılarak tam fonksiyonel bir akıllı panjur sistemi tasarlanmış ve test edilmiştir. Sistem; çevresel sensörlerle uyumlu, hızlı tepki veren, tamamen uzaktan kontrol edilebilir ve modüler bir yapı sunmaktadır. Geliştirilen prototipin akıllı ev otomasyonlarında kolaylıkla uygulanabileceği ve ileride IoT, yapay zekâ destekli karar mekanizmaları veya enerji optimizasyonu gibi ek fonksiyonlarla geliştirilebileceği değerlendirilmektedir.

Automotive: In autonomous vehicles, explaining why a vehicle brakes or changes direction is essential for safety.

5. Conclusion

This study has demonstrated that Explainable Artificial Intelligence (XAI) is a vital bridge between complex AI processes and human understanding.[28] Methodologies like LIME and SHAP, and ethical principles like FAST, ensure that AI systems not only produce accurate results but are also trustworthy, transparent, and accountable. In the future, the ability of human and machine intelligence to form a harmonious partnership will depend on how well AI systems can explain their decisions.[27]

Manufacturing: AI digitizes maintenance processes by preventing the loss of so-called "tribal knowledge."

GridSearch may not have included the global optimum or that the specific structure of the dataset could be better captured by the K-fold approach.

In SVM models, the SVM (K-fold) model achieved the highest performance in terms of recall, minimizing the likelihood of thyroid diseased individuals being overlooked. This feature indicates that SVM should be preferred in clinical applications where the early diagnosis of the disease is critical. The SVM (GridSearch) model, although slightly behind the K-fold version, exhibited strong performance with approximately 89% Accuracy and 83% F1 Score.

The Logistic Regression model showed Accuracy ≈79% and Recall ≈52%. It is insufficient for detecting thyroid diseased individuals and is not recommended for clinical applications.

The Naive Bayes model showed Accuracy ≈78% and F1 Score ≈61. The simple probabilistic approach failed to capture the complex relationships in the dataset.

The Artificial Neural Networks model showed performance close to traditional machine learning models, with Accuracy and F1 Score in the range of 86–87%, proving its ability to capture complex data patterns.

The Random Forest model, on the other hand, topped the general performance and showed high and balanced results across all metrics. The approximate 90% Accuracy and 87% F1 Score demonstrate a successful application of the variance reduction and generalization capability of multiple decision trees. Therefore, Random Forest stands out as the most suitable model in scenarios where overall classification performance is prioritized.

Looking at the General Evaluation, when model performances are collectively assessed, selection can be made based on two key criteria: the F1 Score, which indicates overall success, and Recall, which is of high clinical importance.

As the Best Overall Model conclusion, the Random Forest model was determined to have the highest overall performance for thyroid disease classification, with high accuracy, F1 Score, Precision, and Recall values. However, in scenarios where high Recall is critically important, the SVM (K-fold) model stands out as a strong alternative.

The model was trained using the **AdamW** optimizer (Loshchilov & Hutter, 2019) with a weighted loss function that combined the objectives of all three tasks. Techniques like dropout and gradient clipping were employed for regularization.

3. Results And Discussions

This study represents the first comprehensive initiative in the Turkish literature to model the linguistic manifestations of Alzheimer's disease through simulation and analyze them using artificial intelligence. The obtained findings highlight the TECHNICAL performance of the system, the quality of the generated data, and the potential impact of the project.

3.1. Simulation Data and Marker Validity

An examination of the outputs of the developed simulation engine revealed that the generated texts successfully reflected the features of "fluency loss" and "word omission" observed in real clinical profiles. In particular, the morphological degradation module developed for the agglutinative structure of Turkish was able to naturally produce subtle grammatical errors (e.g., possessive suffix inconsistencies) that English-based models could not capture. Expert evaluations indicated that the simulated texts maintained high linguistic coherence and yielded satisfactory results in terms of the Linguistic Coherence Score. This demonstrates that the synthetic data approach can serve as a valid alternative for biomedical NLP studies in low-resource languages.

3.2. Model Performance and Comparative Analysis

The test results of the trained BERTurk model demonstrated a clear superiority compared to the baseline model in the initial stage of the process. While models trained on AI-supported synthetic data typically achieve an average F1 score of around 0.68, the model in this study achieved an overall Accuracy and F1 Score exceeding 85%. Moreover, the Marker Detection Accuracy was targeted above 78%. These high performance metrics indicate that the model focuses not only on surface-level word matches but also on deep semantic and structural relationships. The severity estimation module successfully distinguished between early, intermediate, and advanced stages of the disease, highlighting the system's potential not only for diagnosis but also for monitoring disease progression.

3.3. Societal and Technological Impacts

The results of this study support the usability of the developed system as a preclinical screening tool. Considering the cost-reducing and quality-of-life enhancing effects of early diagnosis, making this tool accessible via a web interface or mobile application would provide significant societal benefits. Furthermore, the proposed methodology offers a universal framework that can be adapted to other agglutinative languages such as Finnish, Hungarian, and Korean.

3.4. Limitations and Future Work

The primary limitation of this study is that the model was trained on synthetic data. Although the simulation engine is based on clinical findings, real-world validation with actual patient data is required to establish the model's ultimate reliability. In future work, it is planned to evolve the system into a hybrid structure capable of processing not only text but also speech data (speech recognition). Additionally, completing the developed API and web interface and making them available to researchers and clinicians will be a critical step in testing the system's effectiveness in real-world settings.

In conclusion, this study fills an important gap in Turkish NLP and medical informatics, proposing an AI-based, scalable, and highly accurate solution for the early diagnosis of Alzheimer's disease.

Paradigm Shift in Routing Protocols

In traditional networks, the "shortest path" (hop count) was generally preferred for transmitting data from one point to another. However, Yao et al. (2021) and Hayat et al. (2016) argue that this logic is invalid for FANETs. This is because the shortest path may simultaneously be the noisiest or the most spectrally unstable route.

Consequently, in Cognitive Radio-supported systems, **"Spectrum-Aware Routing"** algorithms and **Cross-Layer** designs have come to the fore. Conventionally, communication layers (Physical Layer, Network Layer, etc.) operate independently of one another. In contrast, within a Cross-Layer design, the physical layer informs the network layer with critical data, such as "The
2.4 GHz band is currently highly congested; reroute traffic to vehicles operating on the 5.8 GHz band." This intelligent routing maximizes network throughput while minimizing the Packet Loss Ratio.

Immunity to Electronic Warfare and Jamming

In military swarm operations, enemy jamming constitutes the most significant threat. A jammer blinds communication by broadcasting high power on a specific frequency. Studies by Reyes et al. (2015) and MDPI (2021) have demonstrated that Cognitive Radio establishes a natural defense shield in this regard.

The system perceives sudden and artificial spikes in the noise floor as an attack. The moment the cognitive engine detects this anomaly, it employs the **Frequency Hopping Spread Spectrum (FHSS)** technique to jump to a clear band within seconds. While static-frequency "dumb" systems remain helpless under jamming, a cognitive swarm becomes an "elusive" target for the enemy by constantly shifting frequencies. This dynamic adaptive capability increases the survivability of the swarm by 300%.

The reviewed literature reveals how Cognitive Radio integration in autonomous swarm systems is translated from theory to practice and delineates the TECHNICAL problems it resolves. In this section, we synthesized the performance of this technology through parameters of sensing sensitivity, latency, and security.

example, in the event that an AI system makes an incorrect treatment suggestion, the question of "whether the responsibility belongs to the physician, the software developer, or the institution that developed the system" remains unclear [18]. This uncertainty points to the need for legal regulation of AI systems.

For all these reasons, while the rapid rise of AI in healthcare offers significant opportunities, it also brings multifaceted risks—ethical, legal, sociological, and technical—that need to be managed carefully. To prevent these risks, it is necessary to develop transparent algorithms, strengthen data security, ensure active involvement of ethics committees, and implement AI integration in a balanced manner that does not completely exclude the human factor.

3. Conclusion

Artificial intelligence accelerates diagnosis and treatment processes, reduces costs, and increases efficiency in healthcare services. Earlier and more accurate diagnosis of diseases, optimization of treatment options, and simplification of administrative processes are among the main contributions offered by AI.

For AI-based health systems to be successfully implemented, it is of great importance to clearly define the ethical, legal, and TECHNICAL framework, and meticulously protect the principles of data security, privacy, algorithmic transparency, and clinical reliability.

The widespread use of AI applications on a national scale in Turkey is a significant advantage. The investments made within the scope of the "National Artificial Intelligence Strategy 2021–2025" indicate that AI will play a much more effective role in healthcare services in the future [19].

Overall, the use of AI in healthcare services seems inevitable due to its ability to offer fast, accurate, and economical solutions. However, a multi-stakeholder approach must be adopted for the safe, ethical, and sustainable implementation of these technologies.

adds a significant layer of regulatory risk and financial liability for victim organizations, compounding the direct costs of an attack.

Based on these insights, the implications for policymakers and corporations are clear. National policy should prioritize large-scale public awareness campaigns focused on mobile security hygiene and consider providing enhanced cybersecurity support for small and medium-sized enterprises (SMEs). For their part, corporations must move beyond reactive security postures and adopt proactive, multi-layered defense strategies. This includes implementing robust TECHNICAL frameworks such as the Detection, Avoidance, and Mitigation (DAM) framework (Kapoor et al., 2021) and adopting a Zero Trust architecture to limit the lateral movement of attackers within networks (IBM, 2024). Incident response plans must be updated to integrate legal counsel from the outset to navigate the complexities of KVKK compliance.

Future research should focus on several critical areas to stay ahead of the threat. In-depth analysis of the RaaS affiliate supply chain within Türkiye could reveal key nodes for disruption. Additionally, developing and testing effective TECHNICAL and procedural defense models specifically designed to counter emerging threats like data poisoning will be crucial for maintaining data integrity. Ultimately, countering the persistent and adaptive threat of digital extortion requires an equally proactive, adaptive, and nationally coordinated approach to building cyber resilience.

its behavior, evaluating its own measurement reliability, switching operational modes dynamically, and even predicting adversarial tactics.

Today, the radar–EW competition is no longer defined by raw spectral power but by algorithmic superiority. As radar systems have become more cognitive, electronic warfare systems have become more algorithmic; and as EW has adopted learning-based attack strategies, radar has responded with increasingly sophisticated AI-driven ECCM. Consequently, the relationship between radar and EW must be understood not as a traditional technological contest, but as a mutual, iterative, and cognitively co-evolving process.

In this sense, radar and electronic warfare are not independent engineering domains but mutually dependent and continuously interacting components of a broader technological ecosystem. Their co-evolution unfolds through four fundamental dynamics:

- As radar advances, ECM advances.
- As ECM advances, ECCM advances.
- As ECCM advances, radar becomes more cognitive.
- As radar becomes more cognitive, EW becomes more algorithmic.

To overcome radar's behavior-driven, predictive, and learning-based protection mechanisms, modern electronic warfare has developed AI-powered offensive strategies capable of decoding radar behavior models, disrupting waveform optimization algorithms, corrupting Doppler and range coherence, and directly targeting radar decision-making loops. The outcome of this escalating interaction is unambiguous:

Radar and electronic warfare form an integrated technological architecture in which each system necessitates the evolution of the other; each becomes more complex, intelligent, adaptive, and autonomous precisely because the other exists.

Without the persistent pressure of electronic warfare, modern radar innovations—cognitive processing, MIMO-based high-resolution sensing, adaptive beamforming, LPI waveforms, AI-driven ECCM, and even quantum-metrology-based radar concepts—would never have emerged. Likewise, without these radar advancements, electronic warfare systems would not have achieved their current capabilities in high-fidelity deception, spectral denial, tracking-loop manipulation, and cognitive offensive operations.

Thus, the past, present, and future of radar technology represent far more than the chronological history of a sensing device. They embody a continuously evolving struggle for electromagnetic dominance, in which technical, tactical, architectural, and cognitive dimensions are tightly interwoven. Radar's evolution is therefore not merely a story of engineering advancement, but the manifestation of an enduring, unavoidable, and reciprocal competition within the electromagnetic battlespace.

sağlarken öğretmen, bu araçları kültürlerarası yeterliliği destekleyecek şekilde kurgulayan bir rehber görevi üstlenmektedir.

Özetlemek gerekirse, Fransızca öğretiminde yapay zekânın entegrasyonu, öğrencinin sadece dili konuşmasını değil, o dilin dünyayı anlamlandırma biçimlerini de kavramasını hedeflemelidir. Bu bölümde önerilen modeller, teknolojinin insani ve kültürel değerlerle nasıl harmanlanabileceğine dair somut bir yol haritası sunmaktadır. Gelecekteki çalışmaların, bu dijital araçların etik sınırlarını ve yerel kültürlerle olan etkileşimini daha geniş bağlamlarda irdeleyerek bu zemini derinleştirmesi beklenmektedir.
